RITE® SERIES H100

External Hydraulic Damper, Spring and Weight

Use: Design slows down the opening of the valve to protect the disc assembly in the last few degrees of travel in fluctuating flow applications.

RITE® SERIES SA3

External Backflush Lever and Spring

Use: Design allows manual operation to backflush pipelines and spring applies additional force for valve closure while providing a visual indication of the disc position.

RITE® SERIES SA01

External Spring

Use: Design applies additional force for valve closure. Extra force needed to close as it has rapid media with high potential for flow. Design can be used for downward flow application.

RITE® SERIES SA4

External Position Indicator

Use: Design allows visual indication of degree of open/close.

RITE® SERIES SA1

External Spring and Weight

Use: Design allows additional force for valve closure and additional cracking pressure to the disc which allows for closing time adjustment (decrease/increase). Can be used on applications with mixed solids/liquids. Design can be used for downward flow application.

RITE® SERIES SA4A

External Backflush Lever

Use: Design allows manual operation to backflush pipelines while providing a visual indication of the disc position.

RITE® SERIES SA2

External Limit Switch

Use: Design allows remote indication signal where required for flow and valve position monitoring in automated control system.

RITE® SERIES SA6

External Basket

Use: Design strains impurities, maintains pump prime, and allows valve to close as intended. May include applications with mixed solids/liquids.

OPTIONAL SPECIAL ACCESSORIES FOR CHECK VALVES

RITE® SERIES SA7

External Fusible Link

Use: Design allows fusible link to melt releasing lever allowing disc to close in fire condition to contain spread. Provides failsafe protection and emergency shutoff.

RITE® SERIES SA40A

External Compression Spring and Weight

Use: Design allows additional force for valve closure and additional cracking pressure to disc with protected spring. Closing time adjustment (decrease/increase), may include applications with mixed solids/liquids. Design can be used for downward flow application.

RITE® SERIES SA10

External Weights

Use: Design allows additional cracking pressure to the disc. Weight #1 is used to adjust cracking pressure and Weight #2 is used to counterbalance the disc. For use on low flow rate applications (blowers).

RITE® SERIES SA50

External Compression Spring, Hydraulic Damper and Weight

Use: Design allows additional force for valve closure with protected spring, which slows down valve opening to protect the disc assembly in the last few degrees of travel. Additional cracking pressure to the disc is applied for fluctuating flow applications.

RITE® SERIES SA16

External Weight

Use: Design allows additional cracking pressure to open disc, and torque to close. Design can be used for downward flow application.

RITE® SERIES SA40

External Compression Spring

Use: Design allows additional force for valve closure with protected spring. Extra force is needed to close as it has rapid media with high potential for flow. Design can be used for downward flow application.

RITE® SERIES SA54

External Compression Spring, Reversible

Use: Design allows additional force for valve closure with protected spring to suit various installation directions. Extra force needed to close as it has rapid media with high potential for flow. Site reversible orientation from left/right hand mount.

SYMMETRICAL OR CANTED YOKES

The heart of the Series 98 actuator is the scotch yoke. This mechanism converts linear motion into rotational motion. The piston and/or springs directly couple to a rotating yoke with a slot that engages the sliding blocks.

This type of actuator has a distinct torque curve, which starts high, then dips toward the middle of the stroke, and ends with increasing torque — offering an inherent optimization of torque requirements associated with many valve applications.

SYMMETRICAL YOKE

- > Torque output curve is balanced.
- > Torque demands are similar at seat break and end positions.

CANTED YOKE

- > Torque output curve is shifted.
- > Torque demands are not the same at seat break and end positions.
- > Applications for optimizing the torque output vs shaft angle curve.

SCOTCH YOKE COMMON FEATURES

- > Compact design offers a high torque-to-weight ratio.
- > Modular design offers multiple configurations, providing flexibility and efficiency at reduced cost.
- > Module alignment ensured by precision machined centering rings.
- > Symmetrical yoke or canted yoke options available to meet a broad range of application torque requirements.
- > Optimized for ISO 5211 mounting bases, with fully configurable direct-mount accessories.
- > Easy field configuration and simplified maintenance.
- > Premium epoxy/polyurethane coating as standard.

EMERGENCY SHUTDOWN CAPABILITY

- > Fast Acting (less than one second)
- > Rugged Design
- > Customizable Configurations
- > Manual and Automatic Release Options
- > Certified Safety Integrity Level 3 (SIL) per IEC 61508
