MELTRIC® Corporation

Engineered for Safety. Built for Reliability.

Product Technology and Safety

The technology behind MELTRIC products was developed specifically to address the shortcomings and safety hazards that occur with the use of traditional plugs and receptacles. In 1952, following the observation of an accident with a pin and sleeve device, Gilles Marechal devised a product that combines silver-nickel, butt-style contacts and the load making and breaking capabilities of a switch in the convenience of a plug and receptacle. MELTRIC licensed this technology in the early 1980s and has been supplying its products to North American customers ever since.

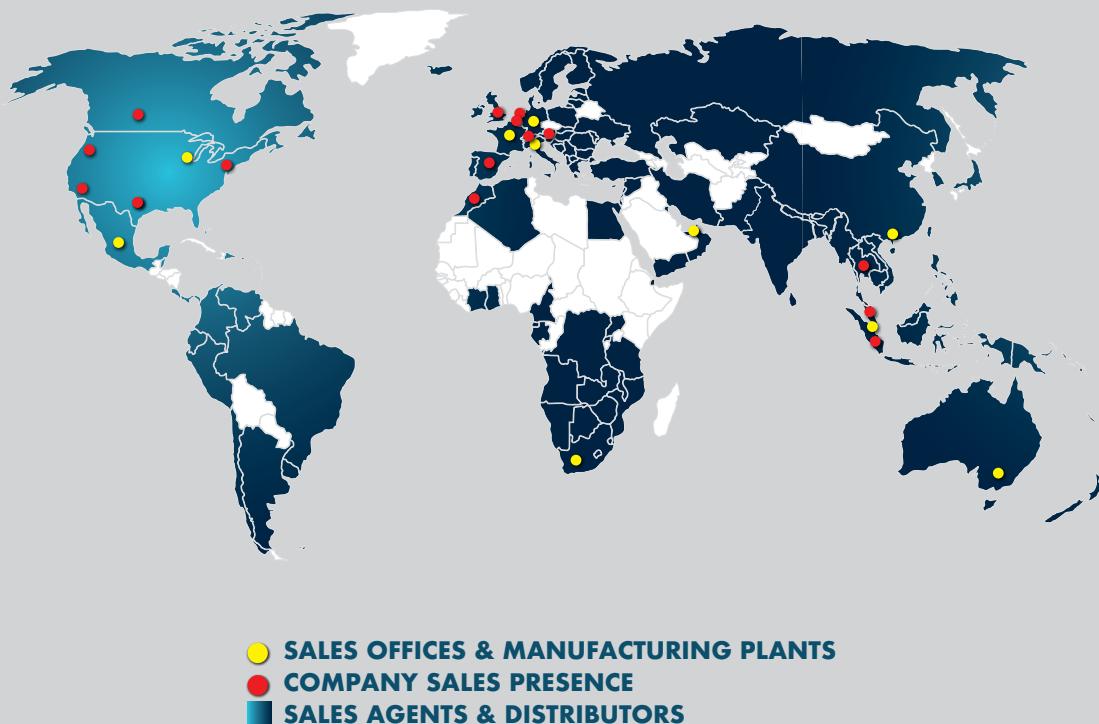

Value

With their unique features and capabilities, MELTRIC products provide users with a safer, more reliable electrical connection device. MELTRIC butt-style contacts provide longer operating lives, help users reduce equipment costs and remove arcing hazards caused by live contacts or wrongful disconnection. These advantages, together with competitive pricing, short lead times, and 5-year warranty on electrical contacts make MELTRIC products the best overall value in the plug and receptacle/connector market.

At MELTRIC Corporation, our only business is electrical plugs and receptacles. We are focused on providing our customers with the best overall value by offering the safest, highest quality, and most reliable plugs and receptacles. We back them with outstanding service and support.

Worldwide Availability

MELTRIC supplies product directly from its factory in Franklin, Wisconsin to customers in the United States, Canada, and Mexico. We can supply outside of North America using our parent company, Marechal Electric Group. Marechal Technology products are manufactured in North America, Europe, South Africa, and Australia.

- SALES OFFICES & MANUFACTURING PLANTS
- COMPANY SALES PRESENCE
- SALES AGENTS & DISTRIBUTORS

Service and Support

MELTRIC backs its superior products with outstanding service and support. A network of over 150 sales associates and over 2,000 distributor locations throughout the US, Canada, and Mexico makes purchasing MELTRIC product simple.

MELTRIC's Customer Service group is trained to answer your questions, and is located at our manufacturing facility to help streamline the order fulfillment process. Our engineering team stands ready to provide both application support and custom design solutions incorporating MELTRIC products tailored to meet your needs. Friendly and personal assistance is only a call away at **800-433-7642**. The efficient order handling by Customer Service, and engineering help-line allows MELTRIC to provide the fastest answers and shortest lead times in the industry.

Quality

Quality is not just an inspection function at MELTRIC, it starts with intelligent designs, robust materials, clear procedures, process measurement and controls, as well as effective communications. The MELTRIC mission is completed through the care, commitment, and involvement of each of its employees.

MELTRIC is dedicated to the continuous improvement of its critical production and support processes and is ISO 9001:2015 certified. MELTRIC designs and manufactures its products to exceed the requirements of applicable UL, CSA, and IEC standards.

MELTRIC® PRODUCT FEATURES...

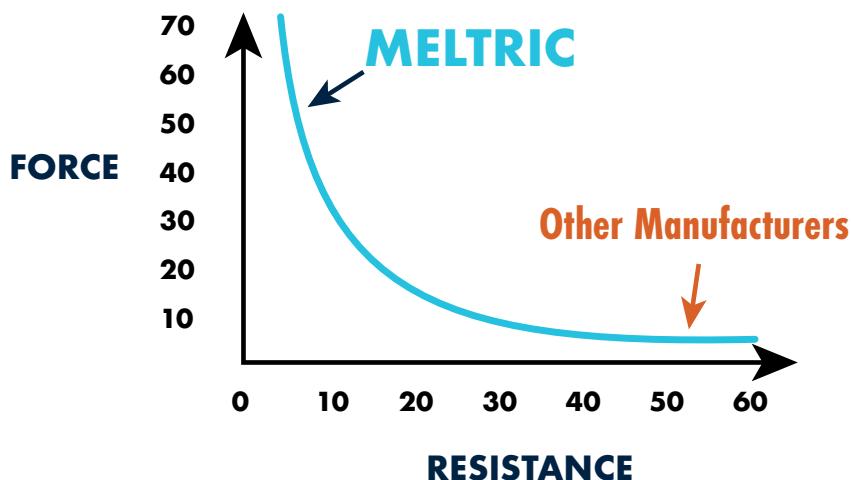

Spring-Loaded, Butt-Style Contacts

MELTRIC products feature unique spring-loaded, butt-style contacts. These help improve electrical performance and user safety. Butt-style contacts ensure a consistent connection. The spring loading of these contacts provides a high contact force that remains consistent over thousands of operations reducing the chance of hazard caused by wear and tear.

As the accompanying chart demonstrates, contact resistance increases as contact force is reduced. Higher contact resistance generates more heat and oxidation, both of which contribute to the deterioration of the contact. Spring-loaded, butt-style contacts reduce this hazard with their strong contact force. Other forms of contacts present hazards because their contact force varies due to wear caused by normal use and cannot compensate for manufacturing variances.

In conjunction with the ejection springs used on many MELTRIC products, the spring-loaded contacts ensure a quick breaking of the connection. This disconnection style serves as a safety feature arresting arcs and reducing hazards independent of personnel input. The operator will simply push the red button for disconnection.

ELECTRICAL RESISTANCE VS. CONTACT FORCE

...AND BENEFITS

Silver-Nickel Contact Material

MELTRIC uses solid silver-nickel (85%/15%) contacts. The silver-nickel alloy has significant advantages over the brass contacts commonly used on competitive devices.

Silver has very low initial contact resistance and is not negatively affected by oxidation. This helps to give it excellent electrical properties that are maintained even at high temperatures and after tarnishing. Nickel is used to provide hardness and improve mechanical properties.

This combination results in a contact material that has superior electrical capabilities and excellent resistance to wear. Silver-nickel also withstands arcing better than alternative materials.

MELTRIC provides added safety and reliability by providing an arc, wear, and tarnish resistant silver-nickel contact that will stand up in the most demanding of environments.

By contrast, the brass material used in most competitive plug and receptacles has a much higher initial contact resistance and is negatively affected by oxidation. In an oxidized state, the contact resistance of brass is more than 20 times higher than that of silver-nickel. In addition, brass is a soft material that wears rapidly. As the oxidation and wear induced reductions in contact force occur on the brass, contact resistance increases. This increases operating temperature, which causes further oxidation and wear, perpetuating a vicious cycle of degradation. Brass is not arc resistant and is not suitable for making and breaking under load.

Dead-Front Construction

Most MELTRIC products feature dead-front construction, which greatly enhances safety by eliminating access to live parts. On most MELTRIC products, the dead-front is accomplished using a safety shutter that closes upon disconnection and can be opened only by an appropriate mating plug. This ensures the live contacts can only be accessed after the plug is inserted into the receptacle.

The design of the product also ensures that the contacts are de-energized prior to the user removing the plug from the receptacle. On competitive devices access to live receptacle contacts is possible, and on some devices the plug contacts may be accessible, while live, when the plug is being removed. MELTRIC eliminates the risk of contact with live contacts by providing the Dead-front Shutter.

MELTRIC PRODUCT FEATURES...

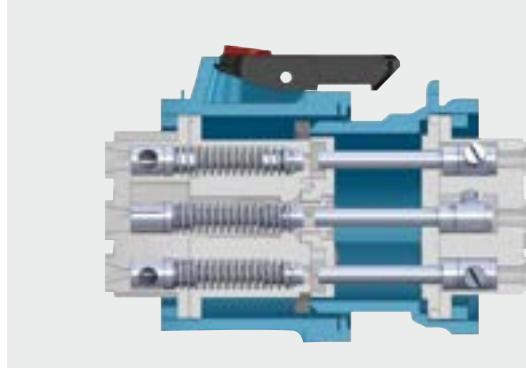

Push-Button Circuit Disconnection

To disconnect most MELTRIC products, the user simply needs to press the red circle located on the pawl. This automatically disconnects the circuit and ejects the plug to its rest (off) position in the receptacle. If desired, the user can then remove the plug from the receptacle by rotating it slightly then withdrawing it. This mode of operation ensures that it is only possible to remove the plug after its contacts have been de-energized, reducing risk of arc flash and electric shock.

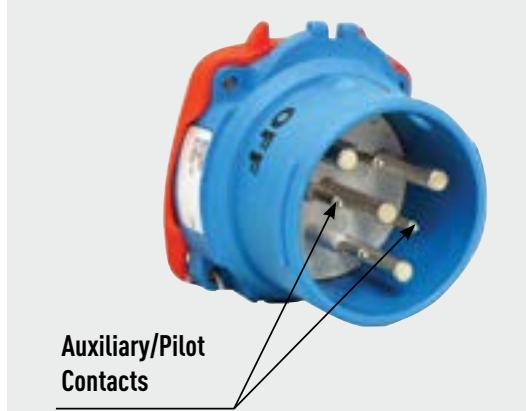

Enclosed Arc Chambers

The contacts on most MELTRIC products make and break within enclosed arc chambers. This ensures that the arcing, which normally occurs during the making and breaking of the contacts, is contained inside the MELTRIC device. This greatly enhances safety and avoids potential injury to users and/or harm to the outside environment.

Optional Auxiliary/Pilot Contacts

Many MELTRIC products are available with optional auxiliary/pilot contacts. These integral pilot contacts allow users the convenience and flexibility of controlling auxiliary equipment, monitoring parameters (such as motor temperature), and/or communicating alarms through the same plug and receptacle used to supply power to the equipment. Because the pilot contacts are integral, they also facilitate the rapid change-out or reconfiguration of equipment by eliminating the need for hardwiring or multiple plug connections. Saving both time and effort for monitoring and replacement of equipment.

Automatic Watertightness

MELTRIC DS and DSN Series Switch-Rated plugs and receptacles offer Type 4X/IP69/IP69K watertightness as soon as the plug is latched to the receptacle, or the receptacle lid is closed. These devices provide automatic and enhanced protection against windblown dust or rain, splashing water, and hose-directed water.

Most pin and sleeve devices require a user to tighten an additional plastic ring to achieve rated weathertightness. Users frequently fail to do this, resulting in leakage.

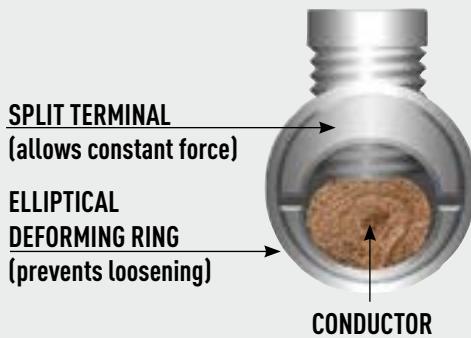

...AND BENEFITS

Spring-Assisted Terminals

The loosening of terminal screws is a common cause for failure on standard plugs and receptacles. MELTRIC provides a more secure and reliable connection with its unique and patented spring-assisted terminal design.

As the terminal screw is tightened against the conductor, the associated pressure expands the split terminal body, causing the spring ring surrounding the terminal to deform into an elliptical shape. The natural tendency for the spring ring to return to its original size and shape ensures that a constant pressure is maintained on the conductor. This allows the terminal to effectively provide superior resistance to vibration, shock, strand settlement, material creep, and thermal cycling, reducing the chance for unwanted disconnection during use.

Lockout/Tagout Capability

Most MELTRIC plugs and receptacles facilitate compliance with OSHA Lockout/Tagout requirements. Only a lock or lockout hasp and tag are needed to ensure that the plug is properly locked out and tagged out. Because the lockout provisions are integrated into the device – it is always available when you need it. On most models, the lockout provision is a simple 5/16" hole in the inlet shroud, this facilitates the insertion of a lockout hasp which prevents the mating of inlet and receptacle.

An optional provision for locking out MELTRIC receptacles is also available. In most cases this is accomplished via a specially machined hole in the receptacle pawl which allows insertion of a padlock to secure the receptacle lid in a closed position. This same optional provision can be used to prevent removal of the plug if desired.

By comparison, to lock out most competitive devices, an additional third-party 'lockout shield or 'plug cap' is required. These devices can be expensive and are often lost, broken, or not available when you need them. MELTRIC makes your lockout tagout provisions easier to perform with integrated lockout provisions located on the electrical device close to the work area.

Engineered Solutions

At MELTRIC, our products are ordered and assembled to meet precise use and installation requirements. This dedication ensures that you benefit from The MELTRIC Advantage, offering versatility, efficiency, and functionality often overlooked by other manufacturers. Once you select male inlets, female receptacles, and matching accessories, our skilled team gathers the components, shipping them in as little as two days. With MELTRIC, modular thinking is key. This approach allows us to build devices tailored to your specifications and deliver them in record time.

MELTRIC PART NUMBERING...

First seven (7) digits for a basic inlet or receptacle part number

6 3 — **3** **4** **0 4** **3**

One (1) to six (6) suffixes for special features

X **X** **X** — **Y** **Y** **Y**

47 = Gray Metal	DXN			660 - 690					
PF	1 = 20			220 - 250	DC				
49 = Gray Metal	1 = 20			577/1000	50				
DSN				120 - 127	60				
63 = Blue Poly				208 - 220					
65 = Black Poly				110 - 125	60				
66 = Black Metal (HazLoc)				220 - 250					
69 = Blue Metal				347 - 600	60				

* Available in metal only.

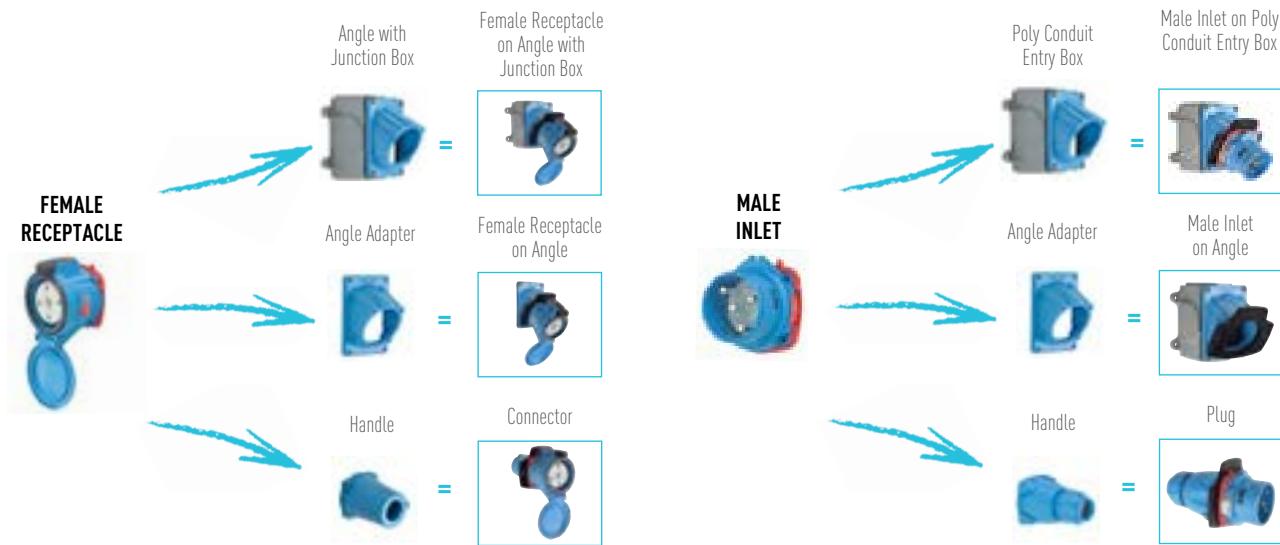

* For DR devices.

- Notes:**
- On metal devices, inlets are not painted, receptacles are painted.
 - This is the Keying Standard for MELTRIC products. Suffixes are available to accommodate non-interchangeable devices of the same size at the same voltage. Please ask for more details.

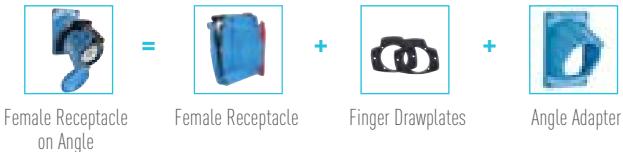

...AND ORDERING GUIDE

A MODULAR SYSTEM

MELTRIC products are ordered and assembled in a modular fashion. Customers should select the desired male inlet and female receptacle part numbers. Then matching accessories such as handles, angles, and junction boxes should be identified and added to the order to create plugs, connectors, or other configurations. This modular system allows MELTRIC to build and ship product to customer specifications in a very short time.

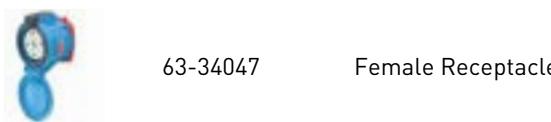

EXAMPLE

EXAMPLE

TYPICAL ORDER

SWITCH-RATED Plugs & Receptacles

THE MELTRIC® ADVANTAGE

Pressing the pawl/button on the receptacle will safely switch off power to the load. The plug can then be withdrawn in complete safety.
(Cutaway model shown for illustration purposes)

Like most MELTRIC products, Switch-Rated plugs and receptacles feature:

- Spring-loaded, butt-style contacts
- Silver-nickel contact materials
- Dead-front design
- Enclosed arc chambers
- Spring-assisted terminals
- Auxiliary contacts

MELTRIC Switch-Rated plugs and receptacles have additional features, including:

- UL & CSA switch-ratings
- Horsepower ratings
- Short circuit ratings up to 100 kA in fuse protected circuits

Switch and Horsepower Ratings

MELTRIC Switch-Rated products are a combination plug, receptacle and non-fusible disconnect switch in the same device. Their integral switch technology ensures the safe breaking of resistive and inductive loads (up to 100 hp or 200 A) before an operator can physically remove the plug from the receptacle.

They are UL and CSA approved for both "branch circuit" and "motor circuit" disconnect switching, making them ideal for connecting motors, welding machines, and virtually any other electrical equipment.

To match the functionality of a Switch-Rated device, it would take a pin and sleeve plug plus a non-fused safety switch.

Short Circuit Ratings

MELTRIC Switch-Rated plugs and receptacles help ensure worker safety, even in fault conditions. They are rated to close into and withstand short circuit currents of up to 100 kA. The protection far surpasses that offered by other plugs and receptacles—even surpassing the short circuit protection offered by most manual motor controllers and mechanical interlocks.

UL & CSA Standards

To achieve their UL 2682 switch ratings, MELTRIC Switch-Rated plugs and receptacles have passed tests that far exceed those of ordinary UL 1682 listed pin and sleeve devices. These tests include horsepower/locked rotor overload tests from the UL 508 standard for Industrial Control Equipment and electrical endurance and short-circuit make-and-withstand testing from the UL 98 standard for Enclosed and Dead-front Switches.

To illustrate how the electrical and mechanical endurance of MELTRIC Switch-Rated plugs and receptacles far exceeds standard plugs, the following chart compares the test requirements for achieving a Switch-Rated plug & receptacle listing with those required for a standard pin and sleeve plug & receptacle listing. (Note: p.f. = Power Factor - for more information see pg 246)

Test Requirements and Ratings Comparison Table

TEST	UL SUBJECT 2682 (used for both UL & CSA listings) SWITCH-RATED PLUGS & RECEPTACLES MOTOR CIRCUIT/BRANCH CIRCUIT DISCONNECT SWITCHING (Tests passed by MELTRIC devices)	UL 1682 & CSA 22.2 No. 182.1 PLUGS, RECEPTACLES & CABLE CONNECTORS OF THE PIN & SLEEVE TYPE	
		CURRENT INTERRUPTING (minimum requirements)	NON-CURRENT INTERRUPTING (minimum requirements)
Temperature Rise	< 30°C	< 30°C	< 30°C
Voltage Withstand	3,000 VAC for 1 minute	3,000 VAC for 1 minute	3,000 VAC for 1 minute
Overload General Use Devices	50 Operations @ 150% rated current (p.f. = .75 - .80)	50 Operations @ 150% rated current (p.f. = .75 - .80)	3 Operations @ 150% rated current (p.f. = .75 - .80)
Mechanical Endurance (including Electrical Operations)	6000 Operations	15-20 A = 5000 Operations 21-63 A = 2000 Operations 64-250 A = 500 Operations	15-20 A = 5000 Operations 21-63 A = 2000 Operations 64-250 A = 250 Operations
Electrical Endurance (with load)	6000 Operations @ rated current & voltage (p.f. = .75 - .80)	15-20 A = 5000 Operations 21-63 A = 1000 Operations ¹ 64-250 A = 250 Operations ¹ @ rated current & voltage (p.f. = .75 - .80)	-
Overload - Locked Rotor (Horsepower Rated Devices) and Electrical Endurance	50 Operations @ 600% of Full Load Amperage (p.f.=.40-.50) + 6000 Operations @ rated horsepower FLA (p.f. = .75 - .80)	50 Operations @ 600% of Full Load Amperage (p.f. = .40 - .50)	-
Short Circuit Withstand	$\geq 10 \text{ kA}^*$ (600 V and $\leq .50 \text{ p.f.}$)	$\geq 10 \text{ kA}$ (600 V and $\leq .50 \text{ p.f.}$)	-
Short Circuit Closing	$\geq 10 \text{ kA}^*$ (600 V and $\leq .50 \text{ p.f.}$)	-	-

¹ Testing alternates between mechanical & electrical operations. This reduces the severity of the electrical test by allowing additional cooling time during electrical testing.

* All MELTRIC Switch-Rated devices (except DS200) are UL listed with short circuit ratings of at least 65 kA achieved at 600 VAC and $\leq .15$ power factor.

See page 244 for
specific ratings
and associated
fusing for each
model.

BENEFITS OF USING MELTRIC SWITCH-RATED DEVICES

Ensure Worker Safety

Switch-Rated plugs and receptacles ensure safety by eliminating hazards associated with pin and sleeve and twist-type devices.

- The integral switching function ensures that the plug contacts are de-energized before an operator can remove the plug from the receptacle. The dead-front design prevents unintended access to live parts.
- Spring-loaded, silver-nickel butt-style contacts maintain proper contact force, withstand arcing, resist wear, and maintain low contact resistance. This ensures the integrity of the connection over thousands of operations and eliminates performance and safety problems common to plugs with brass contacts.
- Spring-loaded plug and receptacle disengagement with push button operation ensures fast and easy load breaking, which minimizes arcing during disconnection. Enclosed arc chambers eliminate arc flash hazards.
- Horsepower, switch, and short-circuit ratings provide additional protection during locked-rotor or other significant overload situations.

Simplify Code Compliance

Switch-Rated devices provide a simple and cost-effective means of helping facilities achieve compliance with the National Electrical Code and NFPA 70E.

NEC Compliance

Articles 430.101 to 430.113 of the National Electrical Code regulate the means of motor disconnection (Canadian Electrical Code section 28-600 to 28-604). They require motors to have readily accessible, line-of-sight disconnects that are an approved switch or a properly rated plug and receptacle.

- **430.102** *A disconnecting means must be located in sight of the motor and driven equipment.*
- **430.107** *The disconnecting means must be readily accessible.*
- **430.109** *The disconnecting means may be an approved switch or horsepower rated plug and receptacle.*

MELTRIC Switch-Rated plugs and receptacles are both horsepower and Switch-Rated. They can function as a line-of-sight disconnect in addition to providing a convenient plug and play power connection for the motor. Installing a Switch-Rated device eliminates the need for an auxiliary disconnect switch.

NFPA 70E (CSA Z462)

This OSHA consensus standard covers electrical safety-related work practices and procedures for employees who work on or near exposed energized electrical conductors or other live circuit parts. Relevant requirements include:

Power must be proven to be off before work can be performed. This requires:

- The safe interruption of the load and opening of the disconnect
- Visual verification/voltage testing to ensure de-energization

The potential electrical hazard must be identified and documented.

- An arc flash risk assessment must be performed
- Flash protection boundaries must be determined

Appropriate steps must be taken to protect persons working near live parts or within the flash protection boundary.

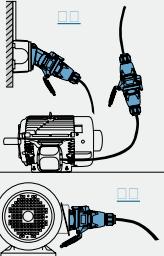

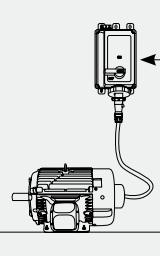

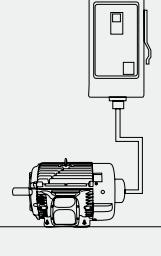

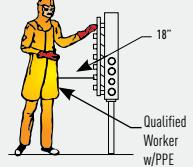

- PPE must be worn based on incident energy exposure levels (cal/cm²)
- Only properly qualified persons are allowed to perform work

...THROUGHOUT YOUR FACILITY

Wiring and connection systems utilizing conventional switches and/or pin and sleeve devices would typically require all of the previously listed protective measures to comply with NFPA 70E or CSA Z462. By using MELTRIC Switch-Rated plugs and receptacles to connect equipment, users can very simply comply with these requirements.

Switch ratings ensure the safe interruption of the load. Visual verification that the power is off is provided when the plug is removed from the receptacle. A dead-front design prevents an operator from being exposed to live parts, eliminating the need to perform hazard analysis, establish flash protection boundaries and use electrical personal protective equipment.

A Comparison of the Motor Change-Out Process

MOTOR CONNECTED WITH A MELTRIC MOTOR PLUG	MOTOR CONNECTED WITH A COMPETING PLUG & RECEPTACLE	MOTOR HARDWIRED TO A BLADED DISCONNECT SWITCH
 <ul style="list-style-type: none"> ► Cord connection allows easy line-of-sight location ► Dead-front eliminates access to live parts and need for cumbersome PPE ► Ability to safely make & break under load eliminates the need for interlocks ► ≥ 10kA short circuit make-and-withstand rating ensures safety during reenergization 	 <ul style="list-style-type: none"> ► Expensive mechanical interlocks are required since these plugs & receptacles cannot safely make & break under load ► The interlock must be mounted on a fixed surface this may make line-of-sight location more difficult 	 <p>The disconnect switch may be difficult to install in line-of-sight of the motor.</p>  <p>Qualified Worker w/PPE</p>
MOTOR CHANGE-OUT PROCESS	MOTOR CHANGE-OUT PROCESS	MOTOR CHANGE-OUT PROCESS
<ol style="list-style-type: none"> 1. Depress the pawl on the receptacle to break the circuit 2. Mechanic removes plug from receptacle 3. Apply lockout/tagout as required 4. Mechanic removes old/install new motor 5. Mechanic inserts plug into receptacle <p>MELTRIC makes it Safe and Easy</p>	<ol style="list-style-type: none"> 1. Open interlock switch 2. Determine PPE requirements and obtain permit for electrical work 3. Remove interlock cover 4. Verify de-energization with a voltmeter test 5. Remove plug 6. Apply lockout/tagout as required 7. Remove old/install new motor 8. Insert plug into receptacle 	<ol style="list-style-type: none"> 1. Switch disconnect to OFF position 2. Apply lockout/tagout 3. Perform shock/arc flash risk assessment 4. Obtain permit for energized electrical work 5. Suit up with appropriate PPE 6. Remove the disconnect switch cover 7. Voltage test to verify de-energization 8. Disconnect motor from hardwiring 9. Remove old/install new motor 10. Connect new motor to hardwiring 11. Jog the motor to ensure proper rotation

Reduce Equipment and Installation Costs

The ability of MELTRIC Switch-Rated devices to safely make and break under full load eliminates the need for the expensive interlocks that are required with pin and sleeve devices. Their ability to function as the NEC required line-of-sight disconnect switch eliminates the need for auxiliary disconnect switches. Optional pilot contacts can eliminate the need of auxiliary connectors in control circuits.

Reduce Equipment Changeout Downtime and Cost

Using MELTRIC Switch-Rated plugs and receptacles to connect motors and other equipment instead of hardwiring can help reduce equipment change-out time by as much as 50%. With new motors pre-wired with MELTRIC plugs or inlets, the only electrical connection required during the change-out will be to plug in the new motor. Thus, a mechanic will be able to perform the change-out without the immediate aid of an electrician. This avoids the inconvenience of scheduling an electrician for a service call eliminating extra downtime required for wiring. The pre-wiring of replacement motors with MELTRIC plugs or inlets can be done off-site and during the convenience of non-downtime periods. This makes MELTRIC plugs and receptacles an ideal choice for 'plug and play' and modular process applications.

SELECTING THE RIGHT MELTRIC SWITCH-RATED PLUG & RECEPTACLE

All SWITCH-RATED devices (DSN and DS) feature DECONTACTOR™ Technology:

- UL and CSA switch-ratings
- Short circuit closing and withstand protection (10 kA to 100 kA)

- Silver-nickel contact material
- Spring-loaded, butt-style contacts

- Dead-front safety shutter
- Optional auxiliary contacts

DSN Series (pages 25-40)

Choose DSN Series for its...

- Compact, lightweight design
- Automatic Type 4X/IP69/IP69K watertightness
- Horsepower ratings up to 75 hp

Common Applications

- Wet or washdown environments
- Plug and play electrical connections

DS Series (pages 41-56)

Choose DS Series for its...

- Amperage range (up to 200 A)
- Larger conductor capacities
- Horsepower ratings up to 100 hp

Common Applications

- Heavy industry
- High amperage equipment

DSN Models and Ratings

MODEL	CASING MATERIAL	MAXIMUM VOLTAGE (VAC)	AMPERAGE RATING	MAXIMUM NUMBER OF CONTACTS		ENVIRONMENTAL RATING	MAXIMUM HORSEPOWER RATING	
				MAIN	AUXILIARY		480 VAC	600 VAC
DSN20	POLY	600	20 A	3P+N+G	2*	Type 4X/IP69/IP69K	7.5 hp	7.5 hp
DSN30	POLY	600	30 A	3P+N+G	2	Type 4X/IP69/IP69K	15 hp	15 hp
DSN60	POLY	600	60 A	3P+N+G	4	Type 4X/IP69/IP69K	20 hp	20 hp
DSN100	POLY OR METAL	600	100 A	3P+N+G	4	Type 4X/IP69/IP69K	50 hp	50 hp
DSN150	POLY OR METAL	600	150 A	3P+N+G	6	Type 4X/IP69/IP69K	75 hp	75 hp

* DSN20 use shunt contacts

SWITCH-RATED Plugs & Receptacles

WATCH
ME>>

The MELTRIC Switch-Rated product line features DECONTACTOR™ technology devices rated from 20 to 200 A with horsepower ratings from 75 to 100 hp. An integral switch mechanism enables workers to safely connect and disconnect motors, welding machines and other industrial equipment.

**DSN COMPACT SIZE WITH IP69K WATERTIGHTNESS P. 25**

- 20 A to 150 A (up to 75 hp)
- Poly or metal casings (100 A and above for metal)
- Automatic Type 4X/IP69/IP69K watertightness

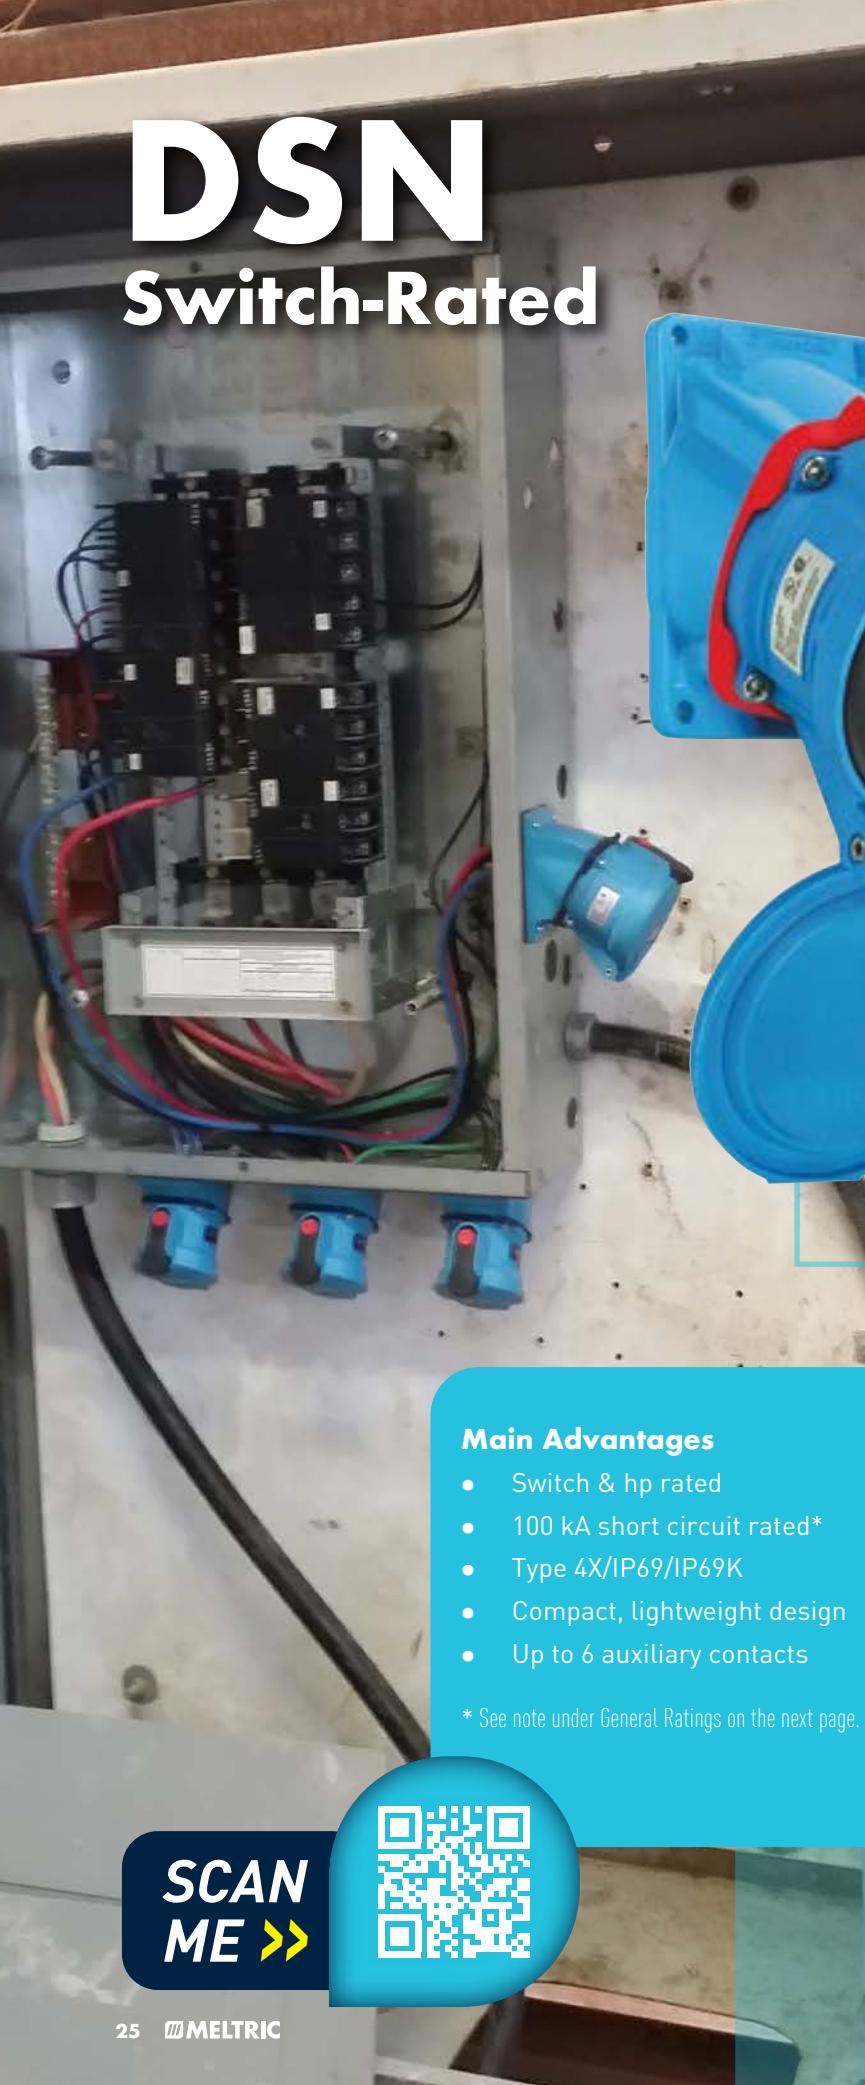

**DS LARGER WIRING CAPACITY AND METAL CASINGS P. 41**

- 20 A to 200 A, (up to 100 hp)
- Poly or metal casings (60 A and above for metal)
- Type 3R or 4X/IP69/IP69K
- Larger conductor capacities

DSN

Switch-Rated

Main Advantages

- Switch & hp rated
- 100 kA short circuit rated*
- Type 4X/IP69/IP69K
- Compact, lightweight design
- Up to 6 auxiliary contacts

* See note under General Ratings on the next page.

PRODUCT FEATURES

DECONTACTOR™ Technology

General Ratings

Amperage	20 to 150 A
Voltage	600 VAC Max
Frequency	50-400 Hz
Horsepower	.75 to 75 hp
Short-Circuit (Make & Withstand)	100 kA*
Environmental	Type 4X/IP69/IP69K
Temperature	Min -40°F/Max 140°F

* DSN20, 30, 60 and 100: Testing was performed with RK1 current limiting fuses sized at 400% or more of the highest full load motor ampacity associated with the devices horsepower ratings.

* DSN 150: 100 kA testing was performed with 225 A RK1 non-time delay Mersen fuses. 10 kA testing was performed with 400 A RK1 non-time delay Mersen fuses.

Operating Instructions

When the plug and receptacle are latched together the circuit is connected.

Pressing the pawl breaks the connection and opens the circuit. The plug is ejected to its rest position; the contacts are now de-energized.

Rotating the de-energized plug 30° counterclockwise closes the safety shutter and frees the plug to be withdrawn from the receptacle.

The plug and the receptacle are separated. The safety shutter prevents access to live parts.

5 To reconnect, align red dots, insert plug into receptacle, rotate 30° clockwise, and apply insertion force.

DS Switch-Rated

Main Advantages

- Switch & hp rated (AC only)
- 65 kA to 100 kA short circuit rated*
- Up to 6 auxiliary contacts
- Amperage ratings up to 200 A
- Metal or Poly construction

* See note under General Ratings on the next page.

PRODUCT FEATURES

DECONTACTOR™ Technology

General Ratings

Amperage	20 to 200 A
Voltage	600 VAC Max
Frequency	50-400 Hz
Horsepower	.75 to 100 hp
Short-Circuit (Make & Withstand)	10 kA to 100 kA*
Environmental	Type 3R or Type 4X/IP69/IP69K
Temperature	Min -40°F/Max 140°F

* DS20, 30, 60 are rated 100 kA. DS200 is rated 10 kA. Testing was performed with RK1 current limiting fuses sized at 400% of the highest full load motor ampacity associated with the device's hp rating.

* DS100 and DS200 are rated 65 kA. Testing was performed with RK5 time delay fuses sized at 100% of the device's rated ampacity.

Category	UL	CSA	IEC	NOM
Plugs and Receptacles	UL 1682	C22.2 No. 182.1	60309-1	NOM-003-SCFI-2014
Branch Circuit Disconnect Switching (AC only)	UL Subject 2682 (Performance tests from UL 98)	UL Subject 2682	60947-3, AC22, AC23	
Motor Circuit Disconnect Switching (AC only)	UL Subject 2682 (Performance tests from UL 98)	UL Subject 2682	60947-3, AC22, AC23	

Operating Instructions

When the plug and receptacle are latched together, the circuit is connected.

Pressing the pawl breaks the connection and opens the circuit. The plug is ejected to its rest position; The contacts are now de-energized.

Rotating the de-energized plug 30° counterclockwise closes the safety shutter and frees the plug to be withdrawn from the receptacle.

The plug and the receptacle are separated. The safety shutter prevents access to live parts.

5 To reconnect, align red dots, insert plug into receptacle, rotate 30° clockwise, and apply insertion force.

MULTIPIN

Plugs & Receptacles

SCAN
ME >>

MELTRIC offers a broad range of multipin devices for use in a wide variety of control and power applications. Each device features MELTRIC spring-loaded, silver-nickel, butt-style contact technology that maximizes durability and performance. Multipin devices are available with as many as 37 or as few as 4 contacts. Products range from 4 A up to 50 A per contact and some include current interruption and/or horsepower ratings.

PN7c COMPACT 5 TO 7 PIN CONNECTORS

- Up to 15 A per contact
- IP66/IP67
- Poly or metal casings

P. 61

PN12c COMPACT 12 PIN CONNECTORS

- Up to 15 A per contact
- IP54/55 (SS), IP66/IP67 (Poly & Metal)
- Poly or metal casings

P. 63

DSN12c POLY CONNECTORS UP TO 12 PINS

- Up to 15 A per contact
- IP66/IP67/IP69/IP69K
- Crimp or solder terminals

P. 65

DSN24c/DS24c CONNECTORS UP TO 24 PINS

- Up to 10 A per contact
- IP54/55 (SS), Type 4X/IP66/IP67 (Poly)
- Crimp or solder terminals

P. 67

DSN37c/DS37c CONNECTORS UP TO 37 PINS

- Up to 8 A per contact
- IP54/55 (SS), Type 4X/IP66/IP67 (Poly)
- Crimp or solder terminals

P. 69

DN9c HP RATED CONNECTORS - 9 PINS

- Up to 5 hp @ 480 VAC or 20 A per contact
- Multiple power or control circuits
- Metal casings

P. 71

DN20c HP RATED CONNECTORS - 20 PINS

- Up to 3 hp @ 480 VAC or 15 A per contact
- Multiple power or control circuits
- Metal casings

P. 73

DS7c/DR7c HIGHER AMP 4 TO 7 PIN CONNECTOR

DS7c

- Up to 30 A per contact and 3 auxiliary contacts
- Suitable for current interrupting

DR7c

- Up to 50 A per contact and 3 auxiliary contacts
- Non-current interrupting

P. 75

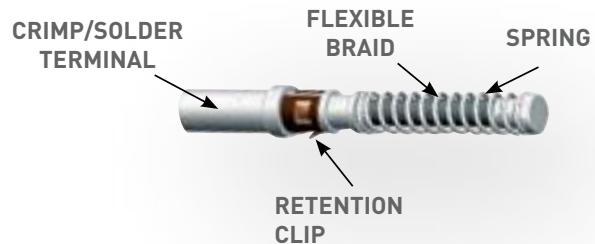

MULTIPIN CONTACTS

MELTRIC Multipin devices are available with either crimp/solder or screw type terminals. Each offers different advantages for different applications.

Crimp/Solder Terminals

PN12c | DSN12c | DSN24c | DS24c | DSN37c | DS37c

Crimp/solder terminals offer a space efficient, easy to work with termination solution. Crimping or soldering of the termination is completed before insertion into the device. This allows the installer ample space and access to terminals during installation.

After terminating the contact, simply insert it by pushing the contact into the back side of the interior insulator until it reaches a positive stop. The contact may be inserted and removed up to three times for future rewiring.

ECONOMIC AND TECHNICAL ADVANTAGES

Crimping ensures an economical and sustainable solution through installation time saving and quality of connection.

- No need for soldering performance qualifications.
- High resistance to vibrations.
- Handling more than 5000 operations: a high durability and quality of connection guaranteed.

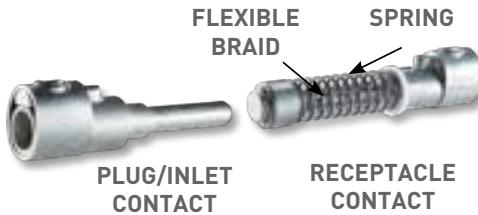

FAST WIRING

- Cable conductors: 18 AWG to 14 AWG.
- Before wiring, equip each conductor with a heat-shrink sleeve.
- After wiring, cover the terminal portion of the contact with the sleeve.
- Crimp the contact with a KNIPEX crimping tool Part # 61CA500 or a GREENLEE crimping tool Part # 45505.
- Perform a double crimping in compliance with the instructions.
- Terminals can also be soldered.

Screw Terminals

PN7c | DN9c | DN20c | DS7c | DR7c

MELTRIC screw terminals have a patented, spring-assisted design that provides permanent and secure conductor connections for the **PN7c**, **DS7c**, and **DR7c**. The patented spring ring design ensures constant pressure against the terminal and conductor. This keeps the terminal screw securely in place and helps to compensate for strand settlement and conductor yield.

Screw terminals are beneficial in situations where resistances to vibration, shock, and thermal cycling are necessary. Standard screw terminals (non-spring assist) are used on the **DN9c** and **DN20c**.

CRIMPING CONTACTS - SIMPLE ASSEMBLY AND DISASSEMBLY

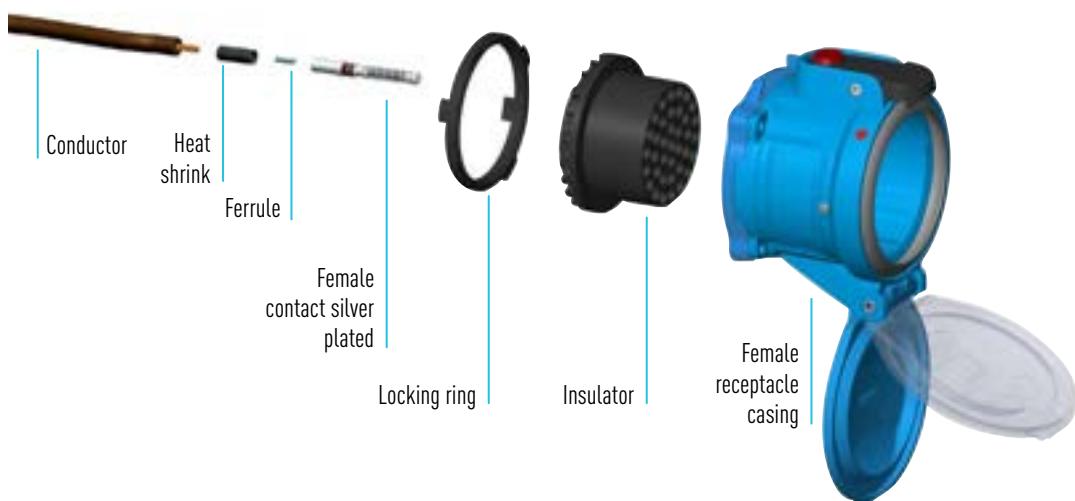

Assembly

To insert contacts when they have been wired is simple.
Push wired contact into rear of insulator until it stops to complete the installation.

Disassembly

To remove, use the tool provided.
Push tool from front onto contact until tool stops.
Contact is then released at rear of insulator.

PN7c Multipin - 15 A

Ratings	
• Max Amperage & Voltage	480 VAC Max/130 VDC
• Amperage Rating	15 A Current Interrupting (AC only)
• Environmental Ratings	IP66/IP67 (Poly & Metal) Type 3R/IP54/IP55 (Stainless Steel)

RETTBOX® S

Electromagnetic Self-Ejection

Main Advantages

- Durable in harsh environments
- Available in multiple voltage configurations
- Safety features provide maximum protection
- Easy plug insertion and removal

- Features and Ratings p. 84
- RETTBOX® S p. 85
- Dimensions p. 86

**SCAN
ME >>**

Product
drawings

**WATCH
ME >>**

PRODUCT FEATURES

RETTBOX® S is a professional use compact and load-breaking, self-ejecting plug. The best-in-class industrial plug and receptacle providing RETTBOX® S complies with the following standards:

- European Low Voltage Directive and RoHS, European REACH regulation
- IEC/EN 61984, IEC/EN 60947-3

Operating Instructions

1

- 1. Easy to Install.**
Direct enclosure on the vehicle body.

Direct wiring to the vehicle battery or the auxiliary battery.

Possible integration onto curved vehicle bodies.

2

- 2. Easy to use**
1. Easy Connection
 - Straight single-hand insertion.
 - Good grip feeling with the handle.
 - Normally closed swivel-lid.
 2. Automatic ejection when the vehicle is starting.
 3. Manual ejection of the plug also available (push button).

Applications

VOLTAGE PRESENCE AND AUXILIARY BATTERY CHARGING LIGHT INDICATORS

Figure 1: with an external battery charger

12 V DC or 24 V DC power supply

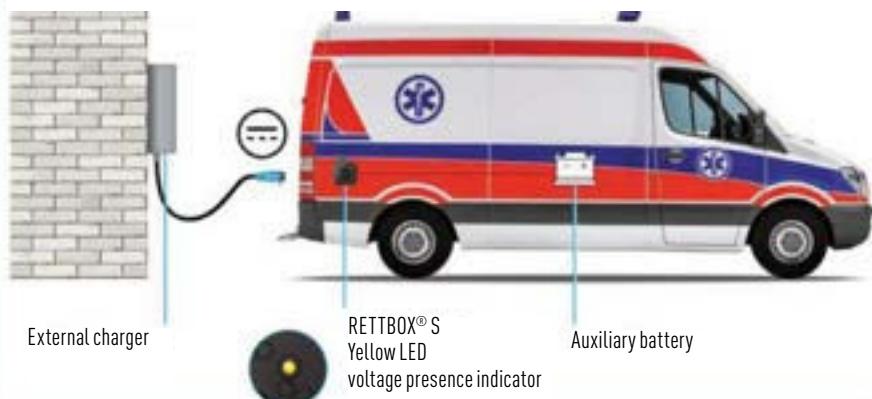

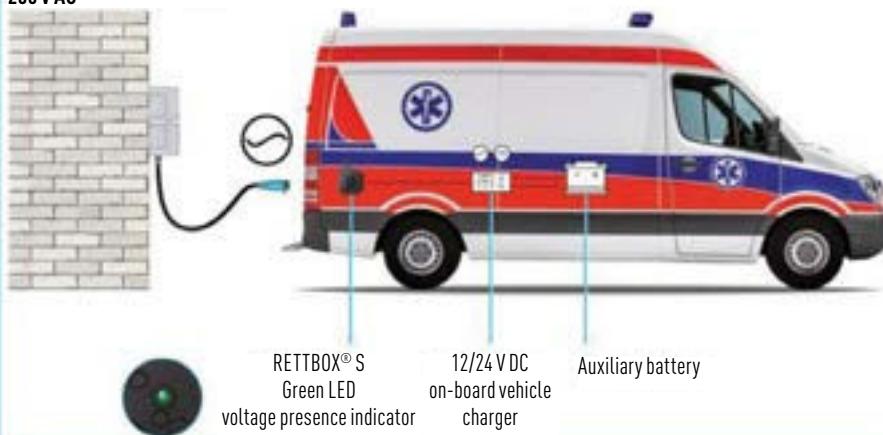

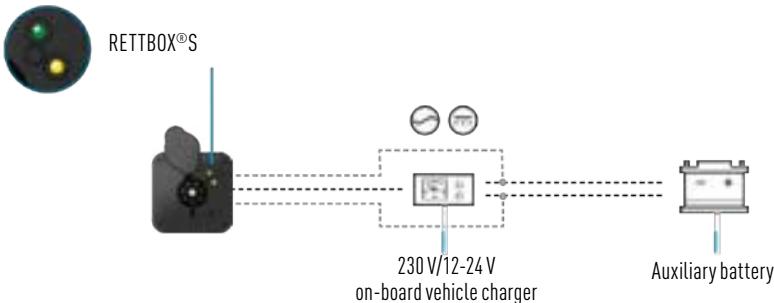

Figure 2: with an on-board vehicle charger

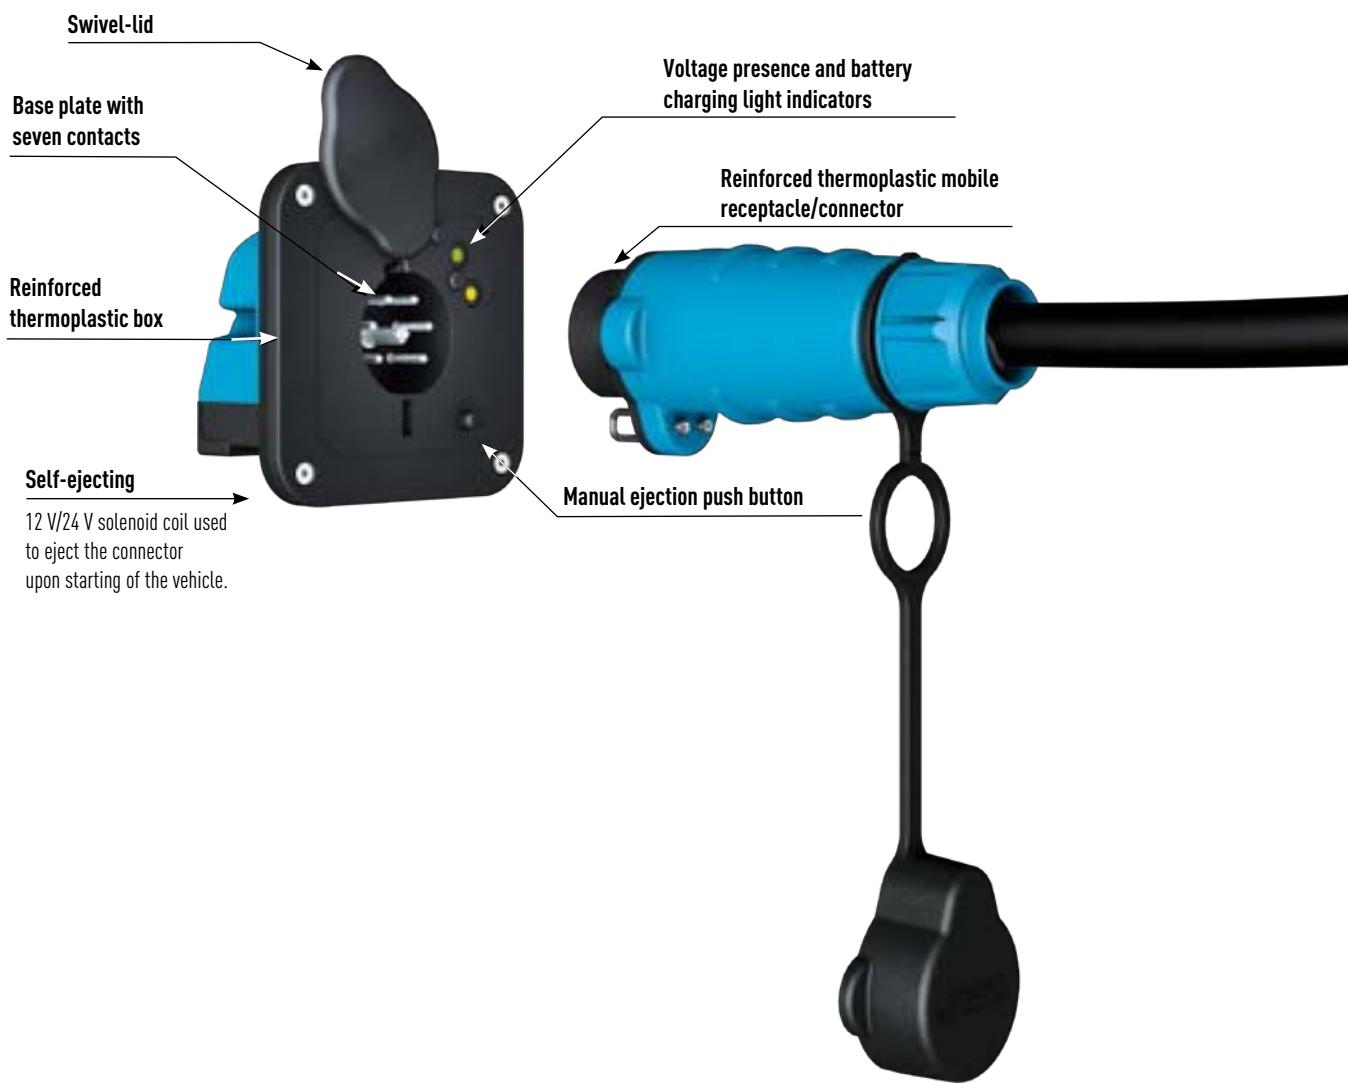

230 V AC

OPTION: Order a 24 V yellow LED battery charging indicator. Reference 151ALED-24J

RETTBOX® S

BENEFITS

- **GUARANTEED EJECTION:**

Automatic ejection upon start-up of the vehicle without any operator intervention.

- **USER-FRIENDLY DEVICE:**

Easy connection with one hand only. Choose from a straight handle or a 90° angled handle.

- **IP54 INGRESS PROTECTION:**

The Ingress protection of the RETTBOX® S allows for safe cleaning of the vehicle and it provides protection against poor weather conditions.

- **VOLTAGE DETECTION LIGHT:**

Indicator lights confirm when there is voltage present and when the charger and battery are powered.

- **DECONTACTOR™ TECHNOLOGY:**

RETTBOX® S features MELTRIC's unique DECONTACTOR™ technology which provides optimal safety and unrivaled performance.

STANDARD DUTY

Plugs & Receptacles

MELTRIC Standard Duty plugs and receptacles provide safe, economical, and robust connections for applications up to 400 A. Each device features MELTRIC spring-loaded, silver-nickel, butt-style contacts for consistent and reliable connections. Exclusive safety features ensure operator safety.

DR LARGER AMPERAGE RANGE

- 30 A to 250 A, Type 3R
- Poly or metal casings (most sizes)
- Larger conductor capacities

P. 89

PN COMPACT AND DURABLE

- 15 A to 20 A
- Up to 600 V

P. 105

PNHT HIGH TEMPERATURE APPLICATIONS

- Temperatures up to 465° F
- Up to 30 A, IP44

P. 113

DSDC DIRECT CURRENT

- 30 A to 200 A, Type 3R and Type 4X
- Poly or metal casings

PRODUCT FEATURES

General Ratings

Amperage	30 to 400 A
Voltage	600 VAC Max
Frequency	50-400 Hz
Short-Circuit (Withstand)	10 kA to 100 kA*
Environmental	Type 4X/IP69/IP69K Type 3R (DR30 & DR50), 4X optional
Temperature	Min -40°F/Max 140°F

* DR30, 50 and 100 are rated 100 kA; DR150, 250 and 400 are 10 kA to 65 kA. Testing was performed with RK1 current limiting fuses sized to at least 100% of the device's ampacity rating.

Current Interruption Listings

Model	Current Interruption Capabilities
DR30	Not for current interrupting
DR50	For current interrupting up to 250 VAC***
DR100	For current interrupting up to 250 VAC***
DR150	For current interrupting up to 250 VAC***
DR250	Not for current interrupting
DR400	Not for current interrupting

*** Devices rated for current interrupting are not intended for repetitive switching duties.

Category	UL	CSA	IEC	NOM
Plugs and Receptacles	UL 1682	C22.2 No. 182.1	60309-1	NOM-003-SCFI-2014

Operating Instructions

When the plug and receptacle are latched together, the circuit is connected.

Pressing the pawl breaks the connection and opens the circuit. The plug is ejected to its rest position.

Rotating the plug 30° counterclockwise closes the safety shutter and frees the plug to be withdrawn from the receptacle.

The plug and the receptacle are separated. The safety shutter prevents access to live parts.

5 To reconnect, insert plug into receptacle, rotate 30° clockwise, and apply insertion force.

DR30 Standard Duty - 30 A

UL/CSA Ratings	
• Max Amperage & Voltage	30 A, 600 VAC
• Current Interruption Capability	Not for current interrupting For Switch-Rated devices, see DS & DSN sections.
• Short Circuit Rating	100 kA Testing was performed with RK1 current limiting fuses sized at least 100% of the device's ampacity rating.
• Environmental Ratings	Type 3R (Standard) Type 4X (Optional)
• Temperature Range	Min -40°F/Max 140°F See pg 254 for temperatures outside of this range.
• Wiring Capacity	Based on THHN wire sizes. Min 14 AWG Max 8 AWG Aux Contacts - Max 14 AWG
• Certifications	UL 1682, CSA C22.2 NO. 182.1, NOM

! See pages 231-240 for detailed information on these options

Order Example: 480 V DR100 + 2 auxiliary contacts

DR100 Poly inlet 3P+G = 31-68243-K04-972

DR150 Standard Duty - 150 A

UL/CSA Ratings	
• Max Amperage & Voltage	150 A, 600 VAC
• Current Interruption Capability	For current interrupting up to 250 VAC
→ For Switch-Rated devices, see DS & DSN sections.	
• Short Circuit Rating	65 kA Testing was performed with RK1 current limiting fuses sized at at least 100% of the device's ampacity rating.
• Environmental Ratings	Type 4X/IP66/IP67/IP69/IP69K
• Temperature Range	Min -40°F/Max 140°F See pg 254 for temperatures outside of this range.
• Wiring Capacity	Based on THHN wire sizes Min 4 AWG Max 2/0 AWG Aux Contacts - Max 14 AWG
• Certifications	UL 1682, CSA C22.2 NO. 182.1, NOM

PRODUCT FEATURES

Operating Instructions

To break the circuit and remove the plug, press the pawl, apply inward force and rotate the plug clockwise.

The plug can be safely withdrawn from the receptacle. The plug contacts remain shrouded until after the circuit is broken.

General Ratings

Amperage	20 A
Voltage	600 VAC Max
Frequency	50-400 Hz
Environmental	4X/IP66/IP67
Temperature	Min -40°F/Max 140°F (465° PNHT pg. 113)

Current Interruption Listings

Model	Current Interruption Capabilities
PN20	For current interrupting

Highlighted Feature

PN Contact

PN devices feature silver-nickel, spring-loaded, butt-style contacts for superior durability and electrical performance.

To reconnect, align the red dots on the plug and receptacle bodies, insert plug into the receptacle, apply insertion force and rotate the plug 20° counterclockwise.

PRODUCT FEATURES

Operating Instructions

Disconnection

Ensure that the circuit is de-energized before removing the plug from the receptacle.

To remove the plug, apply slight inward force and rotate the plug counterclockwise.

General Ratings

Amperage	30 A
Voltage	480 VAC Max
Environmental	IP44
Temperature	Max 465°F (240° C)

NOM listing available

This high-temperature version of the PN is approved for use in temperatures up to 465°F / 240°C.

Therefore, you can supply power to electrical equipment located next to heat sources: machines, industrial facilities, steel works, metallurgy, etc.

Connection

To connect, open lid, align grooves in inlet with pins in the receptacle casing.

Insert and twist clockwise until plug is engaged.

PNHT High Temperature

Ratings
• Max Amperage & Voltage 30 A, 480 VAC, 130 VDC
• Not for Current Interruption Not for current interrupting
• Environmental Ratings IP44
• Temperature Range Min -40°F / Max 465°F See pg 254 for temperatures outside of this range.
• Wiring Capacity Based on THHN wire sizes. Min 14 AWG Max 8 AWG

DSDC

Direct Current

Main Advantages

- Rated for Direct Currents
- Standard locking feature enables locking in the connected and disconnected position.
- Robust Metal or Poly constructions

- Features and Ratings p. 118
- DSDC p. 119

SCAN
ME >>

PRODUCT FEATURES

Operating Instructions

When a DSDC is under load the receptacle should be locked to prevent disconnection.

If the DSDC is NOT under load, it can be disconnected by pressing the pawl.

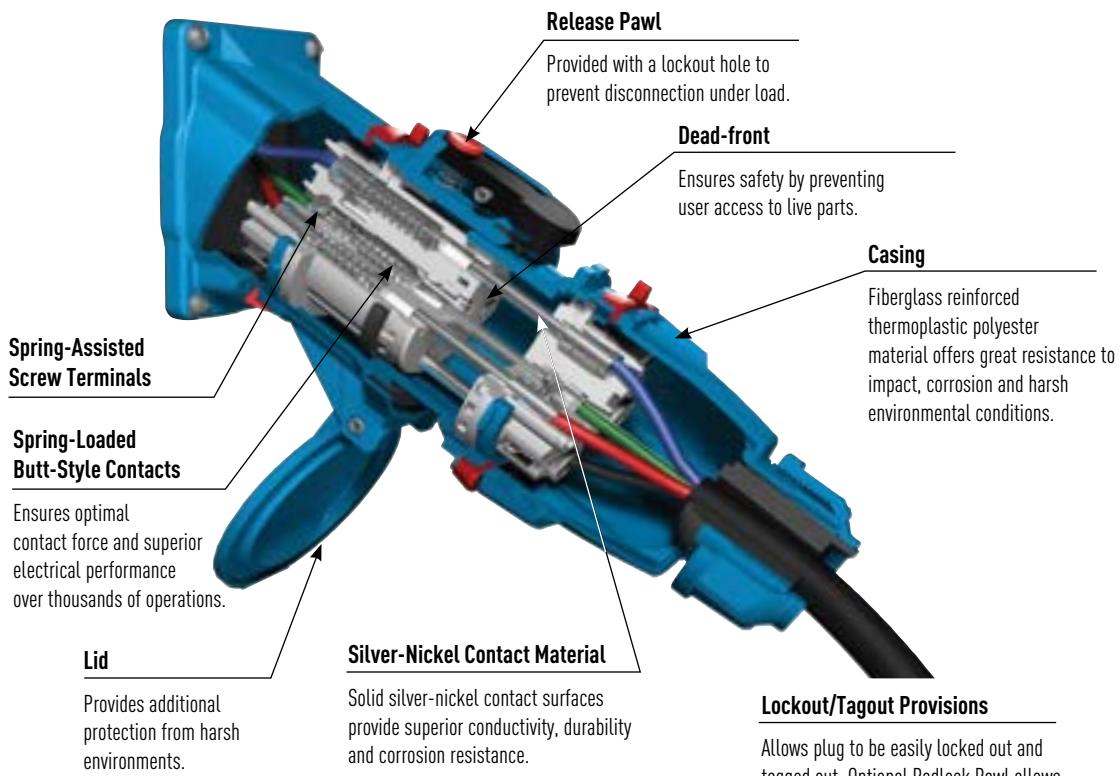

A quarter turn of the plug allows it to be totally withdrawn from the receptacle. This is done in complete safety as the circuit is already de-energized.

The plug and the receptacle are separated. The safety shutter prevents access to live parts.

5 To reconnect, insert plug into receptacle, rotate 30° clockwise, and apply insertion force.

General Ratings

Amperage	130 VDC: 20 to 200 A 250 VDC: 20 to 200 A 600 VDC: 15 to 100 A 750 VDC: 10 to 30 A
Voltage	130 VDC, 250 VDC, 600 VDC or 750 VDC
Environmental	Type 3R, Type 4X
Temperature	Min -40°F/Max 140°F

Highlighted Feature

Receptacle Lockout Hole

All DSDC models are provided with a lockout hole in the pawl. This feature allows locking of the receptacle to prevent accidental disconnection of the plug under load.

Notes: *Polarity for connection purposes. Devices have additional contacts used for load splitting. See information below.					

For international configurations and ratings (IEC,CE) visit meltric.com/international-catalog or contact Customer Service at 800-433-7642.

Jumpers provided on 600 VDC and 750 VDC models

Jumpers are required on all 600 VDC and 750 VDC models as a safety precaution to split the arc in case of accidental disconnection under load. Plugs and receptacles are provided with jumpers installed. Receptacles utilize a jumper between N and L3 poles. Plugs utilize a jumper between L2 and N poles.

INSTALLATION ACCESSORIES

When properly installed, all accessories meet or exceed the environmental ratings of the devices they are mounted to; unless otherwise noted.

HIGH AMPACITY

Plugs & Receptacles

High amperage plugs and receptacles from MELTRIC offer superior safety and performance in harsh environments. Each high amperage product line features MELTRIC's exclusive contact technology along with advanced safety features and relatively easy plug insertion and removal.

PF/PFQ MULTI PHASE, TWIST TO CONNECT

- 300 A to 600 A
- Silver pressure contacts
- Mechanical locking system

P. 123

DR400 THREE PHASE, EASY PLUG INSERTION

- 400 A, 600 V
- Silver-nickel, spring-loaded, butt-style contacts
- Easy closing mechanism

P. 131

CS1000 SINGLE POLE, EASY TO OPERATE

- 400 A, 600 V
- Silver-nickel, spring-loaded, butt-style contacts
- Locking pin prevents accidental disconnects

PRODUCT FEATURES

Operating Instructions

Auxiliary Pilot Contacts

Provided for use with control circuits. They close after and open before the phase contacts.

Casing

Epoxy/powder coated aluminum material offers great resistance to harsh environments.

Mechanical Locking System

Ensures safety and watertightness. Mechanical lock secures the inlet to the receptacle and engages the auxiliary/pilot contacts.

Silver Pressure Contacts

Silver material and self-cleaning action provides maximum conductivity and performance in dirty and corrosive conditions.

Safety Shutter

Protects recessed female contacts and inhibits user access to live parts.

General Ratings

Amperage	300 to 600 A
Voltage	600 VAC, 250 VDC Max
Frequency	50-60 Hz (not UL at 50 Hz)
Environmental	IP66/IP67
Temperature	Min -40°F/Max 140°F

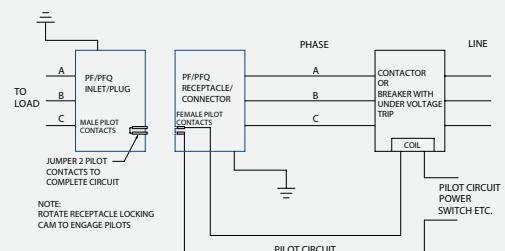

Listings

Category	UL	CSA	NOM
Plugs and Receptacles	UL 1682	C22.2 No. 182.1	NOM-003-SCFI-2014

Listings only apply to 300 A and 400 A devices at 600V or less.

Highlighted Feature

Pilot Contacts

Line diagram of typical PF pilot control circuit

For multiple devices in a parallel circuit, contact factory for example control circuit diagrams.

Listings only apply to 300 A and 400 A devices at 600V or less.

Notes:

- The mechanical locking of the plug to the receptacle via the rotation of a cam, closes the pilot contacts.
- Failure to use a pilot/relay system can create an electrical shock/arc flash hazard.

PF devices are preferred for the ease of operation relative to pin and sleeve devices.

Insert the plug into the receptacle – this is done with little resistance relative to competitive devices.

Twist plug approximately 30° clockwise to engage the phase contacts and to make the unit watertight.

Turning the mechanical lock secures the inlet to the receptacle and closes the pilot circuit which energizes the shunt coil.

5 To disconnect, turn mechanical lock to disengage pilot contacts and de-energize the shunt coil. Twist plug 30° counterclockwise to disengage the phase contacts, withdraw plug.

PF/PFQ High Ampacity - 300-600 A

UL/CSA Ratings	
• Max Amperage & Voltage	PFQ300 = 300 A, 600 VAC, 250 VDC PF300 = 300 A, 600 VAC, 250 VDC PF400 = 400 A, 600 VAC, 250 VDC PF600 = 600 A, 600 VAC, 250 VDC

PRODUCT FEATURES

Operating Instructions

Partially insert the plug.

Place the closing mechanism around tabs on inlet.

Push the handles up, the plug is fully drawn into the receptacle.

Use the locking tool and turn clockwise to tighten screw.

General Ratings

Amperage	400 A at 600 VAC
Environmental	Type 4X, IP69/IP69K
Temperature	Min -40°F/Max 140°F

Highlighted Feature

Silver-Nickel, Spring-Loaded Butt-Style Contacts

Solid Silver-Nickel, Spring-Loaded Butt Style Contacts maintain optimal contact pressure and superior conductivity even in dirty, corrosive environments.

CS1000

Main Advantages

- High Amperage Capacity up to 400 A at 600 VAC, 600 VDC (in North America) or 500 A at 1000 VAC, 1500 VDC (in Europe - CE rated)
- Safety features protect users from live parts and prevent unwanted disconnection
- Silver-nickel, butt-style contacts provide superior performance and corrosion resistance

- Features and Ratings p. 136
- CS1000 p. 137
- Dimensions p. 138

PRODUCT FEATURES

Pilot Connections

Integral pilot circuit for controlling the power circuit.

Mechanical Interlock

Twist ring closes/opens the pilot circuit and locks/unlocks the latching mechanism to prevent connection or disconnection under load.

Phase Label

Indicates phase of receptacle.

Latch Release Button

Enables disconnection of the plug from the receptacle.

Silver Contact Material

Enables maximum performance and durability – withstands at least 2000 operations.

Color Coding

Enables quick visual identification of matching plugs/receptacles.

Protective Caps

Protects contacts when disconnected.

General Ratings

Listing	CSA	IEC	NOM

Highlighted Feature

Pilot Circuit

SP plugs and connectors are designed with safety and durability in mind. Each device is mechanically interlocked with an integral pilot circuit switch for controlling the power circuit in order to prevent connection and disconnection under load.

A typical pilot circuit wiring diagram ≤ 250 VAC circuit shown

Operating Instructions

1

2

3

4

To connect, insert the plug into the receptacle until a click is heard. Rotation of the plug in either direction engages a locking finger, which prevents further rotation.

To close the pilot circuit and mechanically lock the plug into the receptacle, turn the ring on the receptacle until the "1" lines up with the arrow. This turns the power on.

4

Press firmly on the latch release button and simultaneously pull on the inlet. A slight rotation of the plug may also be required.

PRODUCT FEATURES

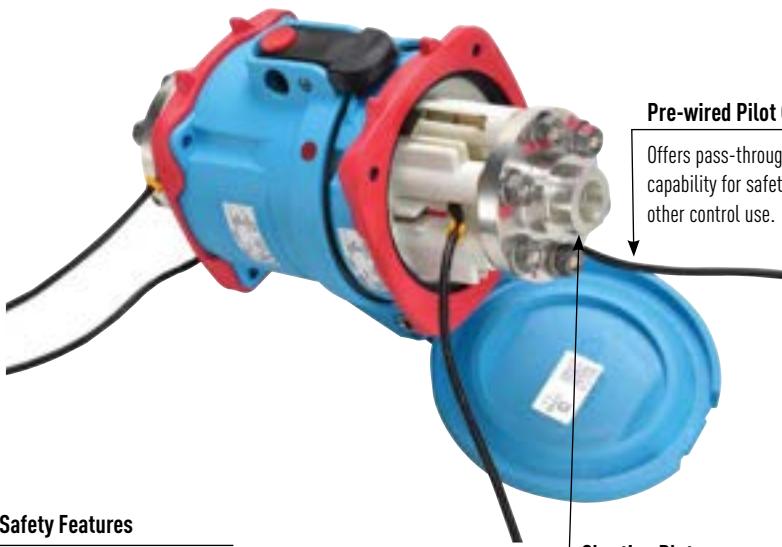

Standard Lockout/Tagout Provisions

Allows plug to be easily locked out and tagged. Included padlock pawl allows lockout/tagout of the receptacle.

Casing

Fiberglass reinforced thermoplastic polyester material offers great resistance to impact, corrosion and harsh environmental conditions.

Safety Features

Designed with mechanical (rotational position) and visual (gasket color) differentiation of phases to prevent intermating.

Operating Instructions

The plug and the receptacle are separated. The safety shutter prevents access to live parts.

5 To reconnect, align red dots, insert plug into receptacle, rotate 30° clockwise, and apply insertion force.

POWER DISTRIBUTION

MELTRIC Switch-Rated plugs and receptacles can help increase efficiency, lower maintenance costs, and deliver power when and where you need it most. Safely and quickly connect and disconnect electrical equipment using MELTRIC plugs and receptacles and relocate power supply systems and generators where you need them. MELTRIC devices can also be engineered to be included in a custom power solution.

**CUSTOM WIDE VARIETY OF PLATFORMS & FEATURES****P. 151**

- Custom engineered
- Featuring Switch-Rated plugs and receptacles
- Poly or metal casings

**RUBBER BOX PORTABLE RUBBER BOX PLATFORM****P. 153**

- Standard or custom configurations
- One, two, or three tier rubber boxes
- Featuring Switch-Rated plugs and receptacles

**SAFETY SWITCHES FOR ADDED PROTECTION****P. 155**

- 30 A to 200 A series
- Heavy-duty, single throw, fusible or non-fusible safety switch
- Switch-Rated receptacles mounted and wired to disconnect switch

CUSTOM

Power Distribution

Custom power solutions from MELTRIC provide the Switch-Rated safety and durability of MELTRIC Switch-Rated plugs and receptacles in a power distribution package built specifically to customer needs. Whether you require power distribution in a vertical stand configuration, a low profile horizontal configuration, a custom configuration, or as a cordset, MELTRIC's engineering team can build a package to meet your needs.

Available Features

- Color-Coded Enclosures
- Phase Indication
- Stainless Steel Enclosures
- 120 V Convenience Outlet
- Rain Hoods
- Timers
- Pilot Circuits
- Wheel Kits
- Shunt Trips
- Under Voltage Trips
- Lifting Provisions
- Power Transformers

Contact MELTRIC® at 800-433-7642 or engineering@meltric.com to review input and output configuration options.

Power input up to 100 A, 480 VAC.
Choose a mounted inlet or a cord and plug.

Mounted Inlet

Cord and Plug

Power Receptacles

Room for (2) DSN60 (or smaller) receptacles per side per tier.

Circuit Protection

Room for up to (10) poles of standard MCB's (mini circuit breakers) per tier.
Note: All configurations use UL489 circuit breakers except 60 A at 480 VAC, which comes with UL1077 breakers.

Convenience Outlets

Room for (2) Type 5-20R duplex receptacles per side per tier or choose other convenience outlets.

RUBBER POWER DISTRIBUTION BOXES

Note: Some configurations shown require sharing of circuit protection devices.

Disconnects

MELTRIC non-interlocked safety switch disconnects are intended for use in power supply applications where additional over current and short circuit protection is desired. Since MELTRIC Switch-Rated Series products are UL and CSA Switch-Rated, there is no need for the receptacle to be interlocked to the switch. The load may be safely made or broken by throwing the switch lever or by simply connecting or disconnecting the plug.

The standard MELTRIC Safety Switch Disconnect consists of a DS Series receptacle and angle mounted and wired to a heavy-duty, single throw, fusible safety switch. They can optionally be provided with DSN series, straight mounting adapters, non-fused switches, or with circuit breaker protection.

Options:

DSN Receptacle (DS is standard)

Straight Adapter (Angle is standard)

Non-Fused (Fused is standard)

Notes: When ordering a Safety Switch Disconnect, replace the “X” with the appropriate number that represents the NEMA Rating of choice.

X (NUMBER)	NEMA RATING
9	Type 4X
7	Type 12
5	Type 3R
1	Type 1

NEMA GUIDELINES

ORDERING INFORMATION FOR OPTIONAL CONFIGURATIONS

DSN Receptacle	To order a DSN receptacle (30-60 A), change prefix “33” to “63”. NOTE: DSN60 products are not available in Type 12.	Example: DSN 60 A Poly Receptacle 250 VAC (2P+G) Type 1 = 63 -67072-121
Straight Adapter	To order a straight adapter, add suffix -S to the part number.	Example: DS 60 A Metal Receptacle 480 VAC (3P+G) Type 1 = 37-67043-321-S
Non-Fused	To order a non fused device, add suffix -NF to the part number.	Example: DS 30 A Poly Receptacle 250 VAC (2P+G) Type 3R = 33-37072-125-NF

SPECIALTY PRODUCTS

MELTRIC manufactures a wide variety of specialty products to fit specific application needs and to help users benefit from the advantages of MELTRIC Switch-Rated plugs and receptacles wherever connections may need to be made and broken.

PHASE/VOLTAGE METERS

Phase Rotation

Voltage/Phase Rotation Meters offer customers an easy means of testing MELTRIC poly or metal 3P+G and 3P+N+G receptacles for voltage as well as motor rotation. The product consists of a poly inlet and poly handle wired to the meter.

Order Example

The plug with voltage indicator should be ordered to match the receptacles to be tested.

Voltage Indicators

Example of proper VAC connection

For a proper connection, the phase LEDs will flash, and the ground LEDs will remain off. If ground LEDs are flashing, there is voltage present and immediate attention is required.

Voltage Indicators offer customers a quick and efficient means of testing their MELTRIC receptacles for voltage and proper connection. The product consists of an inlet (with cap) and handle prewired to the voltage indicator. Designed to provide impact resistance for enhanced durability in all applications.

The indicator LEDs flash at different speeds depending on the voltage. The flashing speed is faster at higher voltages.

HAZARDOUS LOCATION

Plugs & Receptacles

MELTRIC offers a wide range of hazardous location devices for use in power supply and control applications. Each device features our butt-style contact technology that maximizes durability and performance.

DXN POLY POWER CONNECTORS

P. 167

- ATEX or cCSAus rated for Zone 1 & 21 and Class I & II Div 2
- Horsepower rated
- Compact design
- 20 A, 30 A and 60 A sizes

DXA 1 POWER CONNECTORS

P. 179

- ATEX or cCSAus rated for Zone 1 & 21 and Class I & II Div 2
- Robust metal construction
- 20 A sizes

DSN/DS POWER CONNECTORS

P. 183

- cCSAus rated, Zone 2 and Class I Div 2
- Horsepower rated
- Robust metal construction for 60 A and above
- 20 A, 30 A, 60 A, 100 A, 150 A, and 200 A sizes

DR POWER CONNECTORS

P. 197

- cCSAus rated, Zone 2 and Class I Div 2
- Robust metal construction for 60 A and above
- 30 A, 50 A, and 250 A sizes

DSDC POWER CONNECTORS

P. 203

- cCSAus rated, Zone 2 and Class I Div 2
- Robust metal construction for 60 A and above
- 20 A, 30 A, 60 A, 100 A and 200 A series

DX POWER CONNECTORS

P. 205

- ATEX rated for Zone 1 & 21
- Rugged metal construction
- 20 A, 32 A, 63 A and 125 A series
- Up to 600 V, IP65

PNCX LOW POWER CONNECTORS

P. 215

- ATEX rated for Zone 1/21
- IP66/IP67/IP69 water and dust protection
- 5 A, 250 V non-current interrupting

The MELTRIC Advantage

MELTRIC offers a range of hazardous duty rated devices for use in power supply and control applications. Each device features our butt-style contact technology that maximizes durability and performance. Depending on application needs, most devices can be configured for use in-line and wall mounted applications. Hazardous Duty Products prevent the ignition of hazardous gases or dusts, eliminating explosions that may cause personal injury or damage to equipment and the facility. With specialty self-wiping silver-nickel contacts, that clean dust and particles off the contact tips, operational function is ensured for thousands of cycles.

Common industry applications:

- Chemical plants
- Pharmaceutical plants
- Oil and gas facilities
- Grain silos
- Wood processing plants
- Plastics plants
- Wastewater plants

Explanation of Area Classifications and Relevant Listings

The hazardous location area classifications and ratings used in most of North America differ from those used in most of the rest of the world. The North American approach has historically been to use a Class and Division system to identify the different levels of explosion hazards, while the international approach is based on Zones. In recent years, there has been recognition of the Zone classifications in the NEC and CEC, but the vast majority of the area classifications in North America continue to be based on the Class and Division system. The table below shows the relationship between the Class/Division and Zone based classification systems.

Gas

Explosive atmosphere	Continuously present	May occur in normal conditions	May appear accidentally or in abnormal conditions
Class & Division		Class I, Division 1	Class I, Division 2
Zone	Zone 0	Zone 1	Zone 2

Dust

Explosive atmosphere	Continuously present	May occur in normal conditions	May appear accidentally or in abnormal conditions
Class & Division		Class II, Division 1	Class II, Division 2
Zone	Zone 20	Zone 21	Zone 22

MELTRIC offers hazardous locations products rated for use in Zone 1, Zone 2, Zone 21, Zone 22, Class I Division 2 and Class II Division 2 areas as shown by the yellow highlighted cells in the table above. The area classifications, ratings and certifications that apply to each of the various products is shown in the following product specification table.

DXN

Hazardous Location

Main Advantages

- Dead-front Safety Shutter protects user from emergency and accidental disconnection
- Current interrupting for safe disconnection under load
- Easy to handle due to compact, lightweight design
- Available with in-line and wall/panel mounted configurations
- CSA certified with available options for ATEX and IECEx for use in Zones 1 and 2 (gas) and Zones 21 and 22 (dust)

PRODUCT FEATURES

Silver-Nickel Contacts

Silver-nickel contact material provides superior conductivity, durability and corrosion resistance.

Hazardous Location Termination Areas

Includes enhanced creepage and clearance distances and specially designed terminals to ensure perfect and permanent clamping.

Casing

Self-extinguishing, non-static, material provides outstanding resistance to mechanical abuse and chemicals.

Pushbutton Pawl / OFF Button

Provides quick, safe and easy current interruption.

Spring-Loaded Butt-Style Contacts

Ensures optimal contact force and superior electrical performance over thousands of operations.

Arc Isolation Chamber

Minimizes gas/dust volume present during arcing, withstands internal pressure due to ignition of it and isolates the ignition from the outside environment.

Arc-Extinguishing Flame Path

Dissipates internal pressure created during arcing while also preventing any associated ignition sources from reaching the surrounding atmosphere.

Operating Instructions

To connect, align the red dots, push the plug partially in, then turn clockwise slightly to line up the latch with the catch.

Push the plug fully home until it is held in place by the latch; the circuit is now energized.

To disconnect, depress the latch and pull the plug simultaneously. This opens the circuit. The plug contacts are now de-energized.

Rotate 30° counterclockwise and then withdraw the plug. The safety shutter prevents access to live parts.

General Ratings

Amperage	20 to 60 A
Voltage	600 VAC Max
Frequency	50-400 Hz
Horsepower	.75 to 20 hp
Environmental	IP66/IP67
Temperature	Min -15°F/Max 140°F

DXN30 and DXN60 devices are 550 VAC if ordered with optional auxiliary contacts

DXN Certifications

Hazardous Duty Certification (example)

DXN's are offered with CSA or ATEX certifications for use in hazardous locations.

CSA

-40°C ≤ Ta ≤ +60°C

Class I Zone 1 AEx de IIC T5, Gb

Zone 21, AEx tD T90°C Db

Class I Division 2 Gr A,B,C,D

Class I – Indicates suitability for use in applications where flammable Gases, Vapors, or Mists may be present.

Zone 1 – Indicates suitability for use in applications where an explosive environment is likely to occur in the air in sufficient quantities to produce explosive or ignitable mixtures under normal operating conditions.

Division 2 – Indicates suitability for use where exposure to the hazard occurs under abnormal conditions.

GR A,B,C,D – Indicates suitability for use in areas that may contain Acetylene, Hydrogen, Ethylene, or Propane.

Class II Division 2 Gr E,F,G

Class II – Indicates suitability for use in applications where explosive dust atmosphere may occur.

Division 2 – Indicates suitability for use where hazard exposure occurs under abnormal conditions.

GR E,F,G – Indicates suitability for use in areas where Magnesium, Coal or Grain dust may occur.

CSA certification based on IEC 60079-0, 60079-1, 60079-7

ATEX and IECEx

II 2 G/D Ex de IIC T* Gb

Ex tb IIIC T* Db

-40°C ≤ Ta ≤ +60°C T5 T90°C

-40°C ≤ Ta ≤ +40°C T6 T70°C

II – Indicates suitability for installation in surface applications (as opposed to underground mine applications).

2 – Indicates suitability for use where a high level of protection is required and where the presence of an explosive atmosphere is likely to occur occasionally during normal operation (Zone 1 and Zone 21 environments).

G/D – Indicates suitability for installation in areas that may contain flammable gases, vapors/mists, or dusts.

T90°C* – Indicates a maximum surface temperature of the product of 90°C, at -40°C to 60°C ambient.

Ex de – Indicates that explosion protection is provided with (e) increased safety in the conductor termination area, and (d) flame proof chambers for making and breaking the current that can withstand the pressure of internal ignition and that prevent arcs, flame, or other ignition events from being communicated to the surrounding atmosphere.

IIC – Indicates suitability for installation in areas where exposure to any type of gas, including the most dangerous subdivision C gases may occur.

T6* – Temperature class – the maximum product surface temperature is 185°F (85°C) for ambient temperature of 104°F (40°).

ATEX certification was performed by LCIE.

* Temperature ratings vary depending on product and ambient temperature. See specific product section for temperature ratings.

Electrical Performance Testing

Model	Key Performance Tests Passed				
	Mechanical Endurance	Electrical Endurance ¹	Overload Testing ²	Temperature Rise (max)	Dielectric Test
DXN20	-	5000 Operations	50 Operations	30°C	2 x V (rated) + 1000 V
DXN30	1000 Cycles	1000 Operations	50 Operations	30°C	2 x V (rated) + 1000 V
DXN60	1000 Cycles	1000 Operations	50 Operations	30°C	2 x V (rated) + 1000 V

¹ @ 100% of rated current and voltage and 0.6 power factor

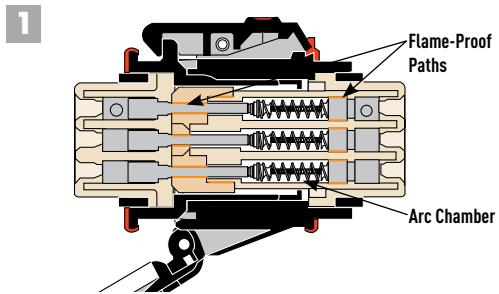

² @125% of rated current, 110% of rated voltage, & 0.6 power factor

DXN Operation

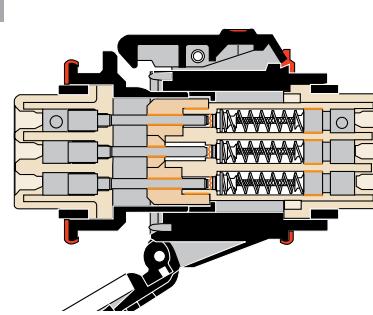

Arcing is a natural occurrence when electrical contacts make and break under load. The purpose of a hazardous duty product is to prevent arcing from igniting hazardous gases or dusts present in the atmosphere into an explosion that may cause personal injury or damage to facilities and equipment. The DXN accomplishes this with specially designed flameproof arc chambers.

The arc chambers are sized to minimize the amount of atmospheric gas or air/dust mixture that may ignite during arcing and are built to contain this internal mini-explosion and withstand the pressure that it generates. The length and width of the flameproof pathways are very precisely designed to provide for the effective dissipation of the pressure, while also ensuring that the arcing and internal ignitions of gases or air/dust mixture in the arc chamber are totally isolated from the surrounding atmosphere.

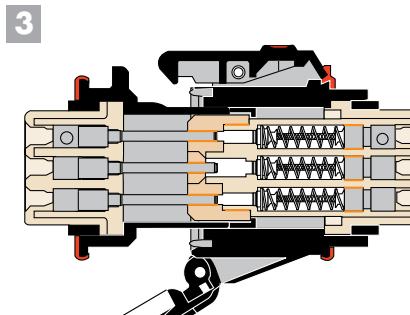

- When the plug and receptacle are connected, the flameproof arc chamber is completed with pressure relief/arc extinguishing pathways between the outer diameter of the plug contact and its associated contact hole in the safety shutter and between the main interior component and receptacle contact base.

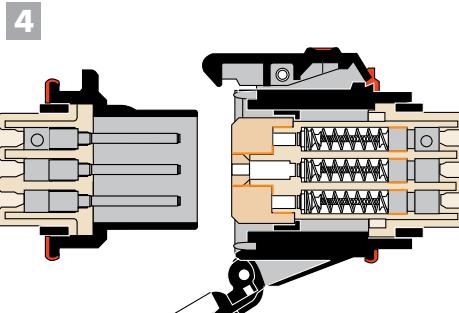

- DXN's are current interrupting rated devices. They can safely make and break under full load and also during moderate overload situations. During the making or breaking of the contacts, the arc chamber completely contains any ignitions of gas or dust due to arcing and the flameproof pathways dissipate the pressure.

- As the plug is being inserted or removed, the flameproof arc chamber and pathways are maintained. This ensures continuous hazardous duty protection and the safety of the user.

- When the plug and receptacle are disconnected, the receptacle maintains a flameproof chamber. In this case, the flameproof pathway exists between the safety shutter and the main interior component. The shutter also prevents access to live parts, providing users with the safety of a dead-front. The plug must be inserted into the safety shutter and be rotated in order to access the receptacle contacts.

NOTE: While DXN devices are current interrupting (and can be safely disconnected under load in emergency or accidental situations), the devices are not Switch-Rated. DXN devices are not intended or advised for use as a primary disconnect in hazardous environments.

PRODUCT FEATURES

Operating Instructions

1

Before connection, ensure that the circuit is de-energized. Align the red dots, push the plug partially in, then turn clockwise slightly to line up the latch with the catch.

2

Push the plug fully home until it is held in place by the latch. The circuit is now closed.

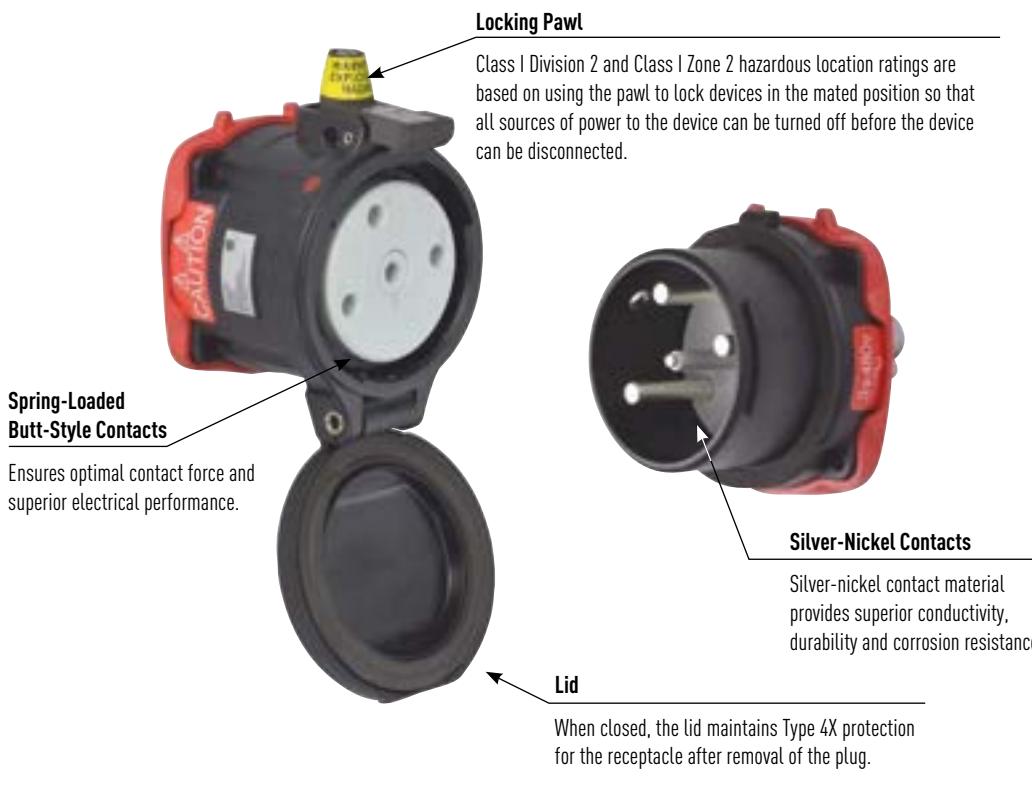

3

Listing Requirement: Tighten screw to lock the plug in the mated position.

4

Optional: Insert a 5/16" lock or locking pin to prevent disconnection or to lock the receptacle lid closed.

Feature Spotlight – Screw-Type Locking Pawl

! Listing Requirement
Users must tighten screw to lock the plug in the mated position

Zone 2/Division 2 DS20 receptacles feature a standard screw-type locking pawl. This required feature allows the user to lock the plug to the receptacle by tightening a screw on the pawl.

For added security, a lockout hole is included on the receptacle that enables the user to insert a 5/16" lock or locking pin to prevent the plug from being disconnected or to lock the receptacle lid closed.

5/16" hole for added security

! See pages 231-240 for detailed information on these options

Feature Spotlight – Screw-Type Locking Pawl

! Listing Requirement
Users must tighten screw to lock the plug in the mated position

Zone 2/Division 2 DS30 receptacles feature a standard screw-type locking pawl. This required feature allows the user to lock the plug to the receptacle by tightening a screw on the pawl.

For added security, a lockout hole is included on the receptacle that enables the user to insert a 5/16" lock or locking pin to prevent the plug from being disconnected or to lock the receptacle lid closed.

5/16" hole for added security

Feature Spotlight – Screw-Type Locking Pawl

! Listing Requirement
Users must tighten screw to lock the plug in the mated position

Zone 2/Division 2 DSDC receptacles feature a standard screw-type locking pawl. This required feature allows the user to lock the plug to the receptacle by tightening a screw on the pawl.

For added security, a lockout hole is included on the receptacle that enables the user to insert a 5/16" lock or locking pin to prevent the plug from being disconnected or to lock the receptacle lid closed.

Part Number Example
250 V DSDC6 with no options
DSDC6 Metal recept 2P+G = 36-64209-HAZ

PRODUCT FEATURES

Operating Instructions

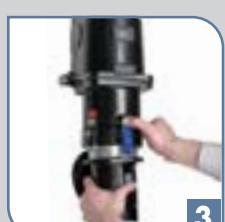

1

When a DX is connected there is total safety.

2

Pressing the pawl while turning the plug about 30° counterclockwise causes the circuit to be broken.

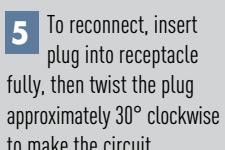

3

Now that the circuit is safely de-energized, continue pressing the pawl while withdrawing the plug from the receptacle.

4

The plug and receptacle are separated. The safety shutter prevents access to live parts.

5

To reconnect, insert plug into receptacle fully, then twist the plug approximately 30° clockwise to make the circuit.

Dead-front

The 'dead' load-side switching contacts block access to the receptacle and are locked in the open position until an appropriate mating plug is fully inserted. This prevents unintended access to live parts and ensures user safety.

ON & OFF Positions when Mated

The switching mechanism allows the circuit to be disconnected without removing the plug.

Self-Returning Receptacle Lid

The lid automatically self-returns to a pre-latched position when the plug is removed. This prevents the entry of dust and debris. The lid must be manually latched to maintain IP65 protection.

Heavy-Duty Aluminum Casing

All components are enclosed in rugged, copper free aluminum housings for maximum durability and protection.

Arc Isolation Chamber

Minimizes gas/dust volume present during arcing, withstands internal pressure due to ignition of it and isolates the ignition from the outside environment.

Spring Operated Switching Mechanism

An integral switching mechanism ensures quick-make, quick-break operation, independent of the motion of the user.

Silver-Nickel Butt-Style Contacts

Contact design provides a superior connection, with maximum conductivity, the ability to withstand arcing and oxidation, excellent wear resistance, and a long operating life. A wiping motion during operation also provides a self-cleaning action.

General Ratings

Amperage	20 to 125 A
Voltage	750 VAC
Frequency	50-400 Hz
Environmental	IP65
Temperature	min -13°F/max 140°F* (DX1/DX3) Min -15°F/Max 140°F* (DX6/DX9)

NOM listing available. Contact Engineering for more information.

Highlighted Feature

Dead-front

The dead-front on the DX receptacle provides protection from accidental tool and wire insertion.

DX Certifications

Hazardous Duty Certification

ATEX and IECEx

II – Indicates suitability for installation in surface applications (as opposed to underground mine applications).

2 – Indicates suitability for use where a high level of protection is required and where the presence of an explosive atmosphere is likely to occur (Zone 1 and Zone 21 environments).

G/D – Indicates suitability for installation in areas that may contain flammable gases, vapors/mists, or dusts.

Ex de – Protection method for gas atmospheres indicating that explosion protection is provided with (e) increased safety in the conductor termination area, and (d) explosion proof chambers for making and breaking the current that can withstand the pressure of internal ignition and that prevent arcs, flame, or other ignition events from being communicated to the surrounding atmosphere.

IIC – Indicates suitability for installation in areas where exposure to any type of gas, including the most dangerous subdivision C gases may occur.

tD – Protection method for dust atmospheres indicating that explosion protection is provided by the type of enclosure (casing) used.

A21 – Indicates a dust tight enclosure (IP6x) is used to achieve a Zone 21 rating.

ATEX & IECEx certification was performed by LCIE.

* Temperature ratings vary depending on product and ambient temperature. See specific product section for temperature ratings.

Electrical Performance Testing

Key Performance Tests Passed				
Model	Mechanical Endurance	Electrical Endurance ¹	Overload Testing ²	Dielectric Test
DX1	-	5000 Operations	50 Operations	2 x V (rated) + 1000 V

IEC/EN	60079-0
	60079-1
	60079-7
	60079-31

DX Operation

Connection

1

Insertion of the Plug

As the plug contact is inserted, it engages and depresses the 'dead' switching contact.

This releases the locking mechanism. The switching contact is free to operate.

2

Charging the Operating Spring

Clockwise rotation of the inserted plug winds the operating spring and rotates the switching contact into position to engage with the live receptacle contact.

3

Making the Circuit

With the final few degrees of rotation, the switching contact is released and force from the spring quickly drives it into engagement with the live receptacle contact.

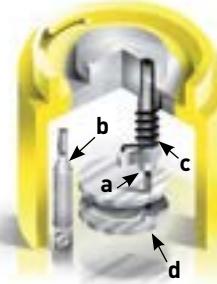

Disconnection

After depressing the pawl, the plug is rotated in a counterclockwise direction. This frees the switching contact for operation and the release of the remaining spring tension causes a quick breaking of the contacts. The plug may now be removed, if desired.

Highlighted Feature

- Crimped Contacts**

PXN12c devices now feature contacts that can be crimped or soldered. Each device is supplied with 13 contacts so that the product can be set up to suit application needs.

Simple Assembly and Disassembly

DSN37c shown

Assembly

To insert contacts when they have been wired is simple. Push wired contact into rear of insulator until it stops to complete the installation.

Disassembly

To remove, use the tool provided. Push tool from front onto contact until tool stops. Contact is then released at rear of insulator.

Operating Instructions

To connect, insert the plug into the receptacle until a click is heard. Rotation of the plug in either direction engages a locking finger, which prevents further rotation.

To close the pilot circuit and mechanically lock the plug into the receptacle, turn the ring on the receptacle until the "1" lines up with the arrow. This turns the power on.

To disconnect, open the pilot circuit and unlock the plug by turning the ring until the "0" is aligned with the arrow. The power is now off.

Press firmly on the latch release button and simultaneously pull on the inlet. A slight rotation of the plug may also be required.

BOXES Hazardous Location

TECHNOR
ITALSMEA

A COMPANY OF MARECHAL ELECTRIC

SB Series

316L Stainless Steel Enclosures

- Meets ATEX and IECEX standards for use in explosive environments. Meets UL standard for use as an industrial control panel (non-hazardous).
- Over 20 standard sizes available
- Custom sizes can be ordered ranging from 100mm x 120mm x 100mm thru 910mm x 1140mm x 500mm
- Can be ordered empty or as a complete customized control panel per customer specifications.

Technical Features

- **Box material:** Stainless steel AISI 316L, 1.5 mm thickness
- **Surface treatment:** Acid treatment
- **Gaskets:** Silicon rubber (suitable for use between -70°C/+200°C)
- **Environmental Rating:** IP66/IP67, Type 1, 4, 4X, 12
- **Shock resistance:** IK10
- **Ambient Temperature:** From -50°C to +60°C (ATEX), From -50°C to +95°C (IECEX) From -40°C to +40°C (UL)
- **Approvals:** cULus: file UL E488994ATEX: IMQ 08 ATEX 028X and IMQ 16 ATEX 004 U IECEX: IECEX IMQ 15.0002X and IECEX IMQ 15.0010U EAC: TR CU 05.B.01093
- **ATEX/IECEX Marking:**
CE II 2 GD
Ex e IIC T(**) Gb / Ex ia IIC T(**) Gb / Ex ib IIC T(**) Gb
Ex tb IIIC T(**) Db IP66/67
** T6/T85°C, T5/T100°C, T4/T135°C
- **Compliance:** IECEX / ATEX: IEC/EN : 60079-0 / 60079-1 / 60079-7 / 60079-11 / 60079-18 / 60079-31 UL: UL 508A and CSA C22.2 No. 14-13
- **Standard certificate label:** Self adhesive UV and corrosion resistant polyester
- **Entries:** Up to 80 mm diameter

Key Options Available

- Entries – added as needed
- Hinges – optional without
- Doors – optional locked
- Side gland plates
- Other options:
 - Breather drains
 - Viewing windows
 - Ground studs
 - Internal mounting plates
 - Acrylic laminated or stainless steel tag & certification labels
 - Other material thickness available
 - Electro polishing

AUXILIARY/PILOT CONTACTS

Auxiliary/Pilot contacts can operate secondary circuits on the inlet or receptacle side of the circuit. They make last and break first when the plug is engaged or disengaged from the receptacle. To order a device with auxiliary/pilot contacts, add the appropriate suffix numbers listed below. Amperage ratings for the auxiliary/pilot contacts depend on the device size and operating voltage (see table below).

Switch-rated plugs and receptacles with auxiliary/pilot contacts can make the operation of a facility safer and more efficient by facilitating the use of advanced control schemes. They allow facilities to:

- Quickly reconfigure or change-out processing equipment.** The need for hardwiring or multiple plug connections is eliminated.
- Reduce equipment costs.** The need for separate connections for the pilot contacts is eliminated.
- Simplify the monitoring of key parameters.** Thermistors on a motor driving a critical process pump can communicate temperature problems via pilot contacts in the DECONTACTOR™.
- Communicate alarm signals or turn off equipment.** When a motor is disconnected or unplugged, the pilot contacts can convey a signal that will de-energize the motor starter.

* Suffix on receptacle only.

PAWL OPTIONS

Mushroom Pawl

The mushroom pawl is available as an alternative to the standard pawl. It is ideal for a quick disconnection of motors and other equipment, or in areas where employees use gloves and it is difficult to operate the standard pawls. The button has a red "stop" label for easy recognition.

Example:

To order on a receptacle add suffix **-375** to the receptacle part number.

DSN20 poly receptacle 3P+G=63-14073-**375**

Available on:

DSN, DS, DR and DN devices only

Screw-Type Locking Pawl

Screw-type locking pawls are available and include a screw which can be tightened to "lock" the pawl in place, preventing release of the plug or the lid.

Example:

To order on a receptacle add suffix **-845** to the receptacle part number.

DS30 poly receptacle 3P+G=33-34163-**845**

Available on:

DSN, DS, DR and DN devices only

Padlock Pawl

Standard pawls and mushroom pawls can be provided with a .32" hole that allows the lid of the receptacle to be locked closed or alternatively the plug can be locked in the connected position. Lockout Pin sold separately

Example:

To order on a receptacle add suffix **-843** to the receptacle part number.

DSN20 poly receptacle 3P+G = 63-14073-**843**

Available on:

DSN, DS, DR, DXN and DN devices only

Notes: A 5/16" diameter lock or Lockout pin is needed for proper operation. Do not substitute a smaller diameter lock/pin.

Metal Pawl

Metal pawls are standard with metal receptacles only. If you prefer a metal pawl on a poly receptacle, add suffix **-824** to the poly receptacle part number.

Example:

DS60 poly receptacle 3P+G=33-64163-**824**

Available on:

DSN, DS, DR and DXN devices only

SELF-EJECTING DEVICES

General

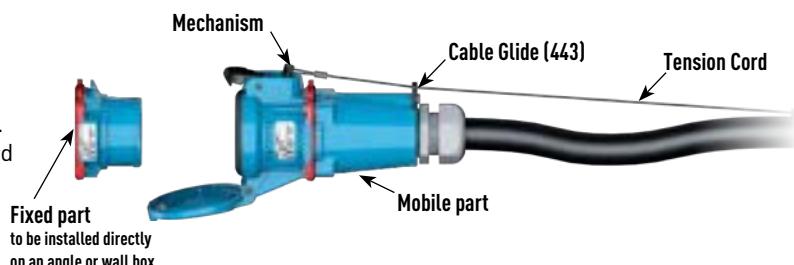

Self-ejecting devices protect equipment from damage caused when mobile equipment is accidentally moved without disconnecting power. Self-ejecting systems are designed to automatically release the plug or connector when tension is detected by a tension cord attached between the pawl and the power cable.

Applications

Self-ejecting devices are commonly used on truck hook-ups, cranes, railroad cars, refrigerated food carts, delivery vehicles and other portable equipment.

Self-Ejecting Female Connector

For self-ejecting female connectors, the standard pawl on the connector is replaced by a "shark's fin" pawl that is attached to the power cable via a tension cord. If the connected equipment is moved, the tension cord lifts the shark's fin pawl and the connector is released before damage can occur.

Available on:

- DSN (All sizes)
- DS (All sizes, except DS200)
- DN9c*, DN20c*, DS7c

How To Order:

To the female receptacle, add suffix **-354**
To the handle part number, add suffix **443**.
Note the poly handle with NPT and poly handle with cord grip for Size 2 devices includes an integrated cable guide and a 443 suffix is not required.

Example:

To order a DSN30 self-ejecting receptacle and poly handle (3/4"), the part numbers would be:

Receptacle: 63-34043-**354**
Handle: 513P0N07

Example:

To order a DSN60 self-ejecting receptacle and poly handle (3/4"), the part numbers would be:

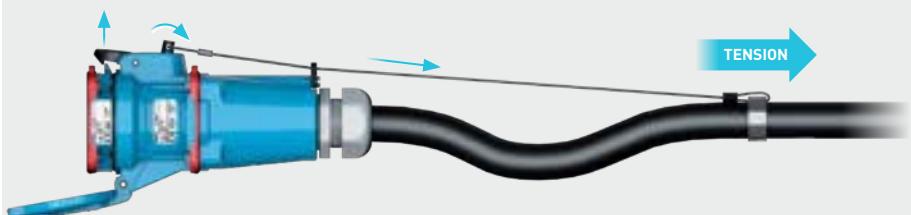

Receptacle: 63-64043-**354**
Handle: 513P0N07**443**

* For DN9c and DN20c ordering, use suffixes listed in DN9c and DN20c section

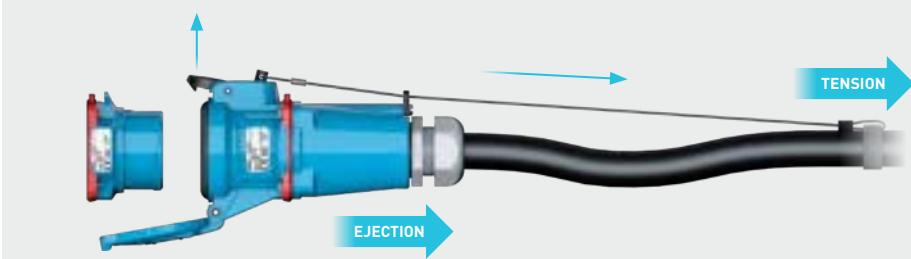

Notes: Self-ejecting devices are modified to allow straight insertion. This defeats the safety shutter and voids the device's switch-rating.

Step 1: Self-ejection system at rest.
A tension cord is attached to the power cable and the shark fin pawl of the plug..

Step 2: Tension on the power cable will automatically lift the shark fin pawl via the tension cord.

Step 3: Once the shark fin pawl is lifted, the receptacle pulls away from the plug.

Self-Ejecting Plug

For self-ejecting plugs, a lever mechanism is added to the assembly and attached to the power cable via a tension cord. When tension is applied to the power cable, the tension cord engages the lever mechanism, which in turn lifts the standard pawl on the receptacle and releases the plug before damage can occur.

Available on:

DSN20, DSN30, DSN60, DS20, DS30, DS60, DS7c

How To Order:

To the male inlet, add suffix **-338**

To the female receptacle, add suffix **-352**

To the handle part number, add suffix **443**

Note the poly handle with NPT and poly handle with cord grip for Size 2 devices includes an integrated cable guide and a 443 suffix is not required.

Example:

To order a DSN30 self-ejecting plug, receptacle and poly handle (3/4"), the part numbers would be:

Inlet: 63-38043-**338**

Receptacle (straight Insertion): 63-34043-**352**

Handle: 512P0N07

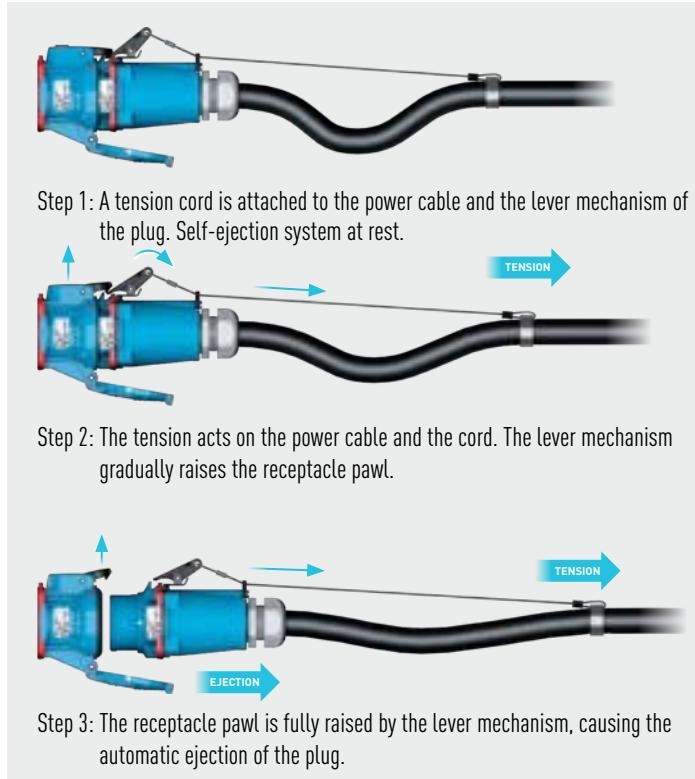

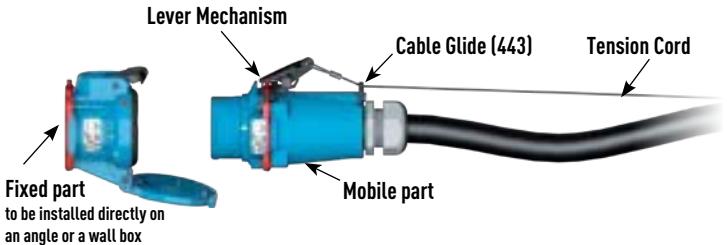

To order a DSN60 self-ejecting plug, receptacle and poly handle (3/4"), the part numbers would be:

Inlet: 63-68043-**338**

Receptacle (straight Insertion): 63-64043-**352**

Handle: 513P0N07**443**

Notes: Self-ejecting devices are modified to allow straight insertion. This defeats the safety shutter and voids the device's switch-rating.

Self-Ejecting Plug (DS100, DSN150, DS200, DN20c only)

For self-ejecting plugs on DS100, DSN150, DS200 and DN20c models, a cam mechanism is used in lieu of the 'lever mechanism.' The principle of operation remains the same.

How To Order:*

To the male inlet, add suffix **-338**

To the female receptacle, add suffix **-352**

To the handle part number, add suffix **443**

Example:

To order a poly DS100 self-ejecting plug, receptacle and poly handle (3/4"), the part numbers would be:

Inlet: 33-98043-**338**

Receptacle (straight Insertion): 33-94043-**352**

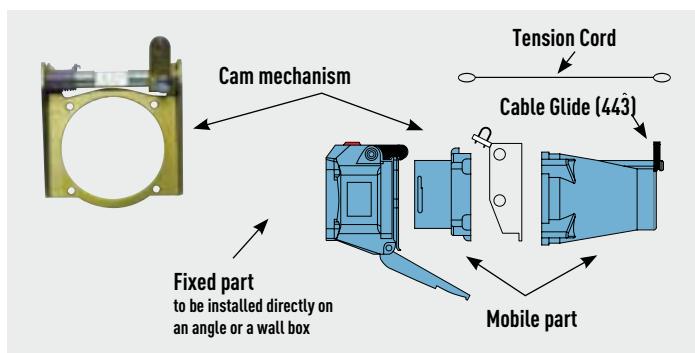

Handle: 515P0N07**443**

* For DS200 ordering, use suffixes listed in DS200 section

* For DN20c ordering, use suffixes listed in DN20c section

Notes: Self-ejecting devices are modified to allow straight insertion. This defeats the safety shutter and voids the device's switch-rating.

LID CONFIGURATIONS

There are four standard open lid configurations depending on the model and size of the device: 180° open, 120° open, 90° open and detached. Optionally, customers can order lids that are Self-Returning, or if the lid opens to 120° as standard, it can be ordered to open 180° for flush mounted inlets (DS & DR only).

Standard Lid Configurations

180° OPENING LIDS

Standard for:

DSN20, DSN30, DSN60, DSN100, DSN150
DS20, DS30, DS60, DS100, DS200
DR30, DR50, DR100, DR150, DR250, DR400
DSDC1, DSDC3, DSDC6, DSDC9, DSDC2
DS7c, DR7c
DSN12c, DSN24c, DSN37c
DXN20, DXN30, DXN60
DX1, DX3, DX6, DX9

120° OPENING LIDS

Standard for:

PN
DN9c, DN20c
PXR12c

Notes: DSN, DS, DR, and DSDC Hazardous receptacles have standard lid configurations that are the same as their industrial ordinary location equivalents, except they are normally closed.

DETACHED LIDS

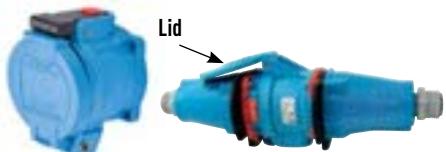

Standard for:

PN stainless steel
DS24c stainless steel
DS37c stainless steel
PFQ300, PF300, PF400, PF600
SP, SPEX
CS1000
DXA1
DXN25c, DXN37c

Optional Lid Configurations

Self-Returning Lid (Receptacles only)

A Self-Returning lid is available for applications where it is desirable to protect the receptacle face from dust, debris, or potential damage. This option provides a lid that will automatically close to a pre-latch position after removal of the plug. The lid **must still be latched manually** in order to achieve rated watertightness.

A Self-Returning lid is recommended for cord to cord applications to keep the lid tucked in and avoid damage.

Examples:
To order a DSN, DS, DR, or DN device with a Self-Returning lid add **-NC** to the receptacle part number.

Available as option on:

DSN (All sizes)
DS (All sizes)
DR (All sizes)
DN (All sizes)

DS20 Poly receptacle 2P+G = 33-14162-**NC**
To order a DXN device with a Self-Returning lid add **-R** to the receptacle part number.

Example:
To order this configuration add suffix **-180** to the receptacle part number.

Available as option on:

DN20c

DN20c Receptacle 10P+G=17-64101-**180**

MICROSWITCH

Female receptacles/connectors with up to 3 poles/4 wires are available with an optional microswitch for operating secondary circuits on the line side of the circuit. The microswitch is rated at 5 A and includes one set of normally open (NO) and one set of normally closed (NC) contacts. With the three phase devices the neutral contact of the plug operates the switch which is located in the neutral contact position in the receptacle. With the single phase units the third phase contact on the plug operates the switch which is located in the third phase contact position in the receptacle.

Examples:

Order a device with an auxiliary switch by adding suffix **-270** to the receptacle or inlet part number.

DSN30 Poly Receptacle 3P+G = 63-34043-**270**

DSN30 Poly Inlet 3P+G=63-38043-**270**

Notes: Devices ordered with auxiliary switch option are not UL/CSA listed.

ADDITIONAL WATERTIGHTNESS

Additional water protection is available for DS or DR models that offer only Type 3R protection as standard. The following Type 4X option may be ordered for these DS or DR models.

Type 4X Watertightness

Type 4X waterproofing is used for applications where connectors, plugs, and receptacles are subjected to water pressure. A gasket is added to the inlet and the receptacle lid is made to self-return and be manually closed.

Example:

To order on a device add suffix **-4X** to the inlet and receptacle part number.

DS20 Poly Inlet 2P + E = 33-18162-**4X**

POLY HANDLES

MELTRIC provides a diverse selection of handle options designed to meet a broad range of applications and requirements. All handles offer ample wiring space. The below descriptions highlight the key benefits for each handle type. For more detailed information or specific use cases, please Contact Engineering or your sales representative.

POLY HANDLE

- Lightweight
- Integrated bushing
- Multiple bushings included to accomodate various cable sizes

Available for:

DSN: Size 1, 2, 3, 4	DR: Size 2, 3, 4	DS Zone 2: Size 2, 3
DS: Size 2, 3, 4	PN: Size 1	DR Zone 2: Size 2, 3
Multipin: Size 1, 2, 3, 4	DSDC: Size 2, 3, 4	DSDC Zone 2: Size 2, 3, 4

POLY ANGLED HANDLE

- Lightweight, compact, ideal for confined spaces
- Integrated bushing
- Multiple bushings included to accomodate various cable sizes

Available for:

DSN: Size 1	Multipin: Size 1	PN: Size 1
-------------	------------------	------------

POLY HANDLE WITH CORD GRIP

- Lightweight
- Cord grip included
- Provides strain relief

Available for:

DSN: Size 1, 2, 3, 4, 5	Multipin: Size 1, 2, 3, 4, 5	PN: Size 1
DS: Size 2, 3, 4, 5, 6	DR: Size 2, 3, 4, 5, 6	DXN: Size 1, 2, 3

POLY HANDLE WITH CLAMP & BUSHING

- Lightweight
- Integrated bushing
- Dedicated strain relief

Available for:

DSN: Size 2, 3	Multipin: Size 2, 3
DS: Size 2, 3	DR: Size 2, 3

POLY HANDLE WITH NPT

- Lightweight
- Add cord grip for strain relief and added ingress protection (p159-160)
- Allows for the use of a variety of industry standard NPT fittings

Available for:

DSN: Size 1, 2, 3, 4, 5	PN: Size 1	DS Zone 2: Size 2, 3, 4
DS: Size 2, 3, 4, 5, 6	DSDC: Size 2, 3, 4, 5, 6	DR Zone 2: Size 2, 3
Multipin: Size 1, 2, 3, 4, 5	DSP: Size 4	DSDC Zone 2: Size 2, 3, 4

POLY HANDLE WITH BUILT-IN DRAWPLATES

- Lightweight
- Ideal for cord-to-cord applications
- Multiple bushings included to accomodate various cable sizes

Available for:

DSN: Size 2, 3	Multipin: Size 2, 3
DS: Size 2, 3	DR: Size 2, 3

POLY EXTENDED HANDLE

- Integrated bushing
- Lightweight, space for extra wiring
- Multiple bushings included to accomodate various cable sizes

Available for:

DSN: Size 1	Multipin: Size 1
-------------	------------------

SANTOPRENE HANDLE

- Lightweight
- Integrated bushing
- Longer for extra wiring space
- Dedicated strain relief

Available for:

DSN: Size 4, 5	Multipin: Size 4, 5	DS Zone 2: Size 5
DS: Size 4, 5, 6	DR: Size 4, 5, 6	DR Zone 2: Size 6

POLY 90° WITH NPT

- Lightweight
- Allows for the use of a variety of industry standard NPT fittings

Available for:

PN7c: Size 1	PN20: Size 1
--------------	--------------

METAL HANDLES

OVERSIZED METAL HANDLE WITH NPT

- Versatile cord grip options (pg 159-160)
- Easy handling for large cable
- Ergonomic dual grips
- Allows for the use of a variety of industry standard NPT fittings

Available for:

DSN: Size 5

DR: Size 5, 6, 7

DS: Size 5, 6

DSN Zone 2: Size 5

METAL HANDLE WITH CORD GRIP

- Cord grip included
- Provides strain relief

Available for:

DSN: Size 1, 2, 3, 4, 5

Multipin: Size 1, 2, 3, 4, 5

PN: Size 1

DS: Size 2, 3, 4, 5, 6

DR: Size 2, 3, 4, 5, 6

STRAIGHT HANDLE (BOLT-ON OR NPT)

- Ergonomic dual grips
- Bump-outs provide drop resistance
- Bolt-on: Longer for extra wiring space, integrated bushing
- NPT: Allows for the use of a variety of industry NPT fittings; versatile cord grip options (pg 159-160)

Available for:

DS: Size 6

DR: Size 6, 7

METAL STRAIGHT HANDLE

PF shown

- Ergonomic dual grips
- Bolt-on: Longer for extra wiring space, integrated bushing
- NPT: Allows for the use of a variety of industry NPT fittings; versatile cord grip options (pg 159-160)

Available for:

PF: Size C

PFQ: Size F

METAL HANDLE WITH CORD GRIP (FOR HIGH TEMP)

- Ideal for high temperature environments

Available for:

PNHT: Size 1

METAL HANDLE WITH NPT

- Add cord grip for strain relief (pg 159-160)
- Allows for the use of a variety of industry standard NPT fittings
- NPT to connect to a flexible conduit connector

Available for:

DSN: Size 1, 2, 3, 4, 5

PN: Size 1

DS Zone 2: Size 5

DS: Size 2, 3, 4, 5, 6

PNHT: Size 1

DR: Size 2, 3, 4, 5, 6

DSDC Zone 2: Size 2, 3, 4, 5, 6

LARGE METAL HANDLE WITH CORD GRIP, MESH AND CABLE RANGE

- Easy handling for large cable
- Ergonomic dual grips
- Cord grip included
- Provides strain relief

Available for:

DR: Size 7

METAL ANGLE HANDLE

- Ergonomic dual grips
- Reduces space and stress on device connection
- NPT: Allows for the use of a variety of industry NPT fittings; versatile cord grip options (pg 159-160)

Available for:

PF: Size C

PFQ: Size F

INLET/PLUG CAPS

Protective Inlet/Plug Caps

Neoprene caps provide an extra level of protection from dust, dirt, and rough handling for male plugs.

Typical for DSN,
DS20, DS30, DS60,
DS100C, DR30,
DR50, DR100, DXN

Typical for
DSN150, DS100,
DS200, DR150,
DR250, DR400

Typical for DN devices

Typical for
PN devices

Padlockable Inlet/Plug Caps

Padlockable caps can be locked in place to prevent unwanted removal.

Typical for: DSN20, DSN30, DSN60, DSN100
DS20, DS30, DS60,
DR30, DR50, DR100
DSDC1, DSDC3, DSDC6

Typical for: DS60, DS100, DS200
DSN100, DSN150,
DR100, DR150, DR250, DR400,
DSDC9, DSDC2

Notes: A 5/16" diameter lock/pin is needed for proper operation. Do not substitute a smaller diameter lock/pin.

The inlet lockout hole is not completely sealed off by the DS_MC and Springloaded Padlockable caps. If environmental protection is needed while the plug is disconnected, the inlet should be ordered without the standard hole.

Example:

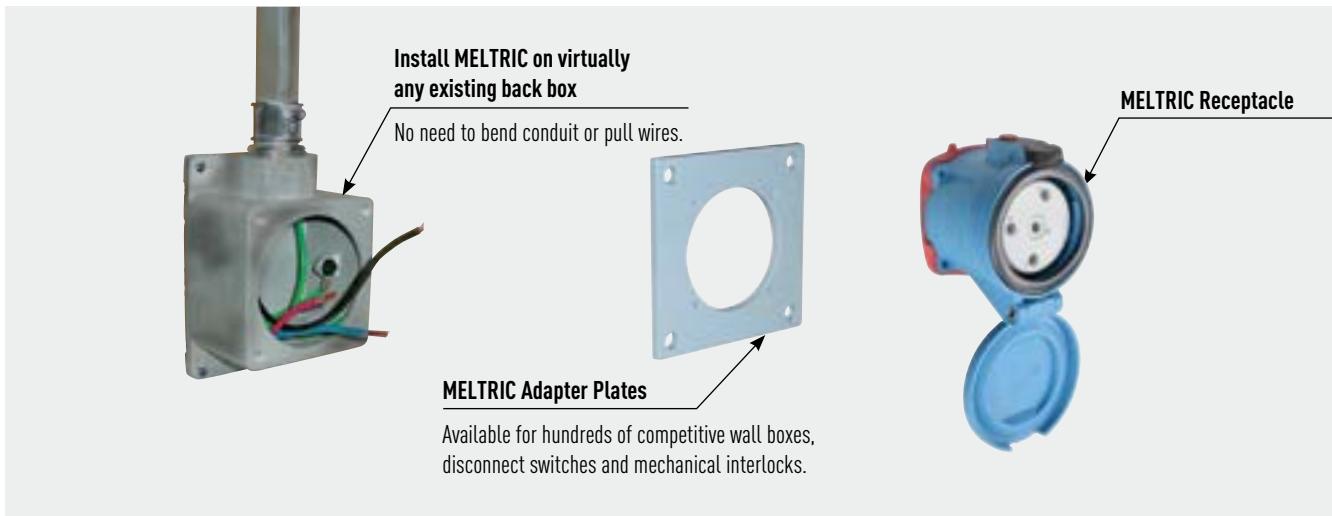

To order an inlet without a lockout hole add suffix -A155 to the inlet part number.

DS60 Metal inlet 2P+G= 37-68162-A155

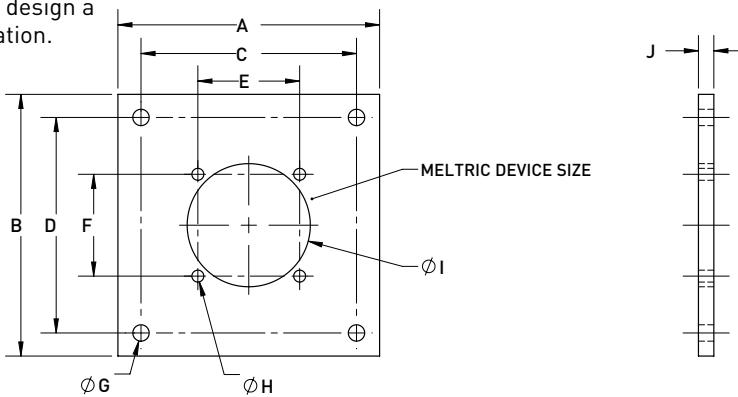

ADAPTER PLATES

Updating your facility with MELTRIC plugs and receptacles is simple and affordable with MELTRIC adapter plates. They allow the mounting of MELTRIC devices to existing boxes previously used for competitive devices. This avoids the cost and hassle of installing new boxes and performing associated re-piping and rewiring.

If an adapter plate for the box you have is not listed, contact Customer Service and MELTRIC will design a new one to fit your application.

ELECTRICAL PERFORMANCE – Switch-Rated, Current Interrupting Rated and Non-Current Interrupting Rated Devices

Switch-Rated Plugs & Receptacles

MELTRIC DSN & DS Series products are UL & CSA listed as Switch-Rated plugs and receptacles. These ratings allow them to be used as a motor circuit disconnect switch, as well as a branch circuit disconnect switch. Switch-Rated plugs and receptacles have passed electrical overload, short circuit, and endurance tests that are far more rigorous than those applied to other plugs and receptacles. These tests include the functional requirements for safety disconnect switches in addition to manual motor controllers. For more information about the tested electrical performance of Switch-Rated devices consult pages 244 - 246.

Current Interrupting Rated Plugs & Receptacles

Other MELTRIC devices such as the DXN plugs and receptacles are UL and/or CSA rated for "current interrupting". A current interrupting rated plug and receptacle is not subjected to the same level of endurance testing as a Switch-Rated device and does not need to be subjected to any overload-locked rotor or short circuit testing (see pages 244-245 for performance test comparisons). Plug and receptacles rated for "current interrupting" are not intended to be used as switches, but can withstand making and breaking of normal resistive loads. Devices that are not hp and short circuit rated are not intended to make and break motor loads or other inductive loads.

Non-Current Interrupting Rated Plugs & Receptacles

Many competitive plugs and receptacles, as well as some MELTRIC devices are "non-current interrupting" rated. They are not approved by UL or CSA for connecting or disconnecting under load. They have passed the minimum test requirements for plugs and receptacles but they have not passed current interrupting performance tests or the more demanding electrical endurance, overload and short circuit tests required of Switch-Rated devices. For more information about the tested electrical performance of non-current interrupting rated devices consult pages 244-245.

ELECTRICAL PERFORMANCE

Overload Conditions

UL & CSA standards for plugs and receptacles require that the devices be able to withstand overload conditions. General use conditions are simulated by testing a device to a specified number of operations (50) at 150% of rated current and a power factor (p.f.) between 0.75 and 0.80. Switch-Rated plugs and receptacles that are horsepower rated must perform overload testing at 600% of full load motor current with a more severe power factor (between 0.40 and 0.50) to simulate locked rotor conditions.

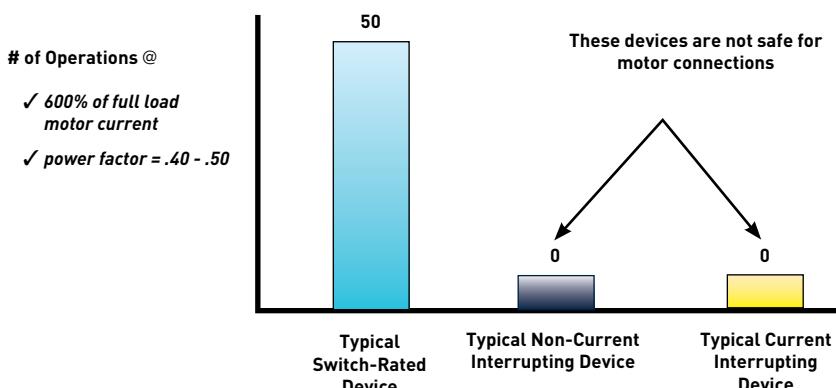

UL & CSA Standards – Overload Test Requirements and Ratings Comparisons

Test	UL Subject 2682 (used for both UL & CSA listings)	UL 1682 & CSA 22.2 No. 182.1	
	Switch-Rated Plugs & Receptacles	Plugs, Receptacles & Cable Connectors of the Pin & Sleeve Type	
	Motor/Branch Circuit Switch-Rated (Typical)	Current Interrupting	Non-Current Interrupting (Typical)
Overload (General Use Devices)	50 Operations @ 150% of rated Current (p.f. = .75 - .80)	50 Operations @ 150% of rated Current (p.f. = .75 - .80)	3 Operations @ 150% of rated Current (p.f. = .75 - .80)
Overload - Locked Rotor (Horsepower Rated Devices) and Electrical Endurance	50 Operations @ 600% of Full Load Amperage (p.f. = .40 - .50) + 6000 Operations @ rated horsepower FLA (p.f. = .75-.80)	50 Operations*	@ 600% Full Load Amperage (p.f. = .40 - .50)

The overload requirement for testing DC devices is 1 operation.

*Testing is optional.

Test Results: Completed Operations at Overload/Locked Rotor Condition

MELTRIC is Reliable
MELTRIC devices can withstand temporary overloads due to frequent restarting of motors.

Brass pin and sleeve devices cannot withstand temporary overloads that heavily oxidize contacts, causing them to weld.

Motors and other equipment can be quickly and safely connected or disconnected with MELTRIC's Switch-Rated plugs and receptacles.

ELECTRICAL PERFORMANCE

Mechanical and Electrical Endurance

UL and CSA standards require endurance testing to ensure that rated performance is maintained over the expected life of the device. The severity of this testing depends on the rating of the device.

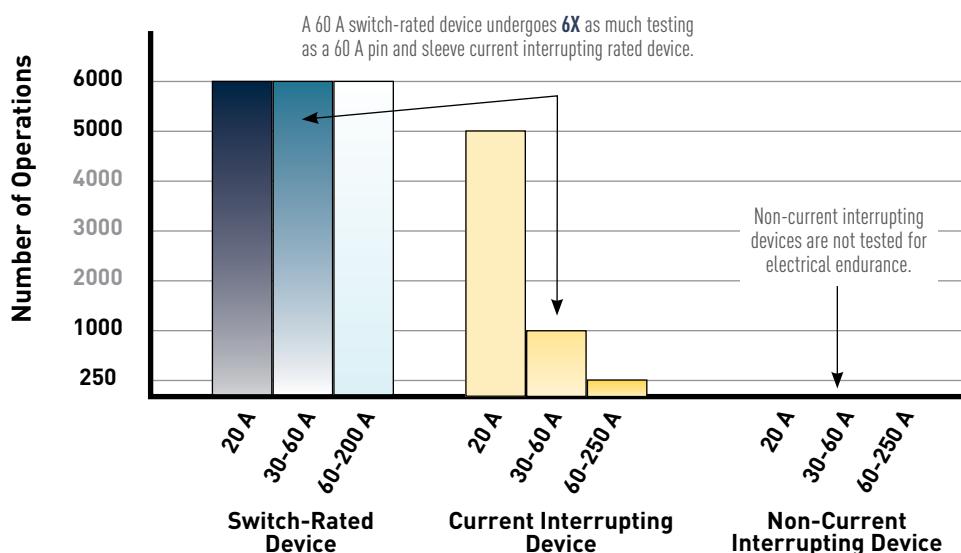

As shown in the chart below, non-current interrupting devices are tested only for mechanical endurance. Current interrupting devices are additionally subjected to moderate electrical endurance testing while Switch-Rated devices are subjected to a much more severe level of electrical endurance testing, which is similar to that required of disconnect switches. In this regard, Switch-Rated devices may be required to make and break under full load more than 20 times as many operations (depending upon device amperage) as a current interrupting rated pin and sleeve device.

UL & CSA Standards – Endurance Test Requirements and Ratings Comparisons

Test	UL Subject 2682 (used for both UL & CSA listings) Switch-Rated Plugs & Receptacles	UL 1682 & CSA 22.2 No. 182.1	
		Plugs, Receptacles & Cable Connectors of the Pin & Sleeve Type	Current Interrupting (Typical) Non-Current Interrupting (Typical)
Mechanical Endurance (including Electrical Operations)	6000 Operations	15-20 A = 5000 Operations 21-63 A = 2000 Operations 64-250 A = 500 Operations	15-20 A = 5000 Operations 21-63 A = 2000 Operations 64-250 A = 250 Operations
Electrical Endurance (with load)	6000 Operations @ Rated Current & Voltage (p.f. = .75-.80)	15-20 A = 5000 Operations 21-63 A = 1000 Operations ¹ 64-250 A = 250 Operations ¹ @ Rated Current & Voltage (p.f. = .75 - .80)	-

Notes: ¹ Testing alternates between mechanical & electrical operations. This reduces the severity of the electrical test by allowing additional cooling time during electrical testing.

Electrical Endurance Test Comparison

ELECTRICAL PERFORMANCE

Short Circuit Protection

MELTRIC's DS and DSN products have successfully completed high fault current short circuit testing. All of these devices have short circuit make (close) and withstand ratings of either 10 kA, 65 kA, or 100 kA. UL witnessed and approved this testing.

UL Recognized Short Circuit Capabilities

Plug & Receptacle Type	UL Recognized Short Circuit Capabilities		Product Standard
	Withstand	Short Circuit Ratings	
General Use Pin & Sleeve Devices	None	None	UL 1682
Horsepower Rated Twist-Type Devices	1 kA	None	UL 498
Motor Rated Pin & Sleeve Devices	10 kA	None	UL 1682
MELTRIC Switch-Rated Devices	≥ 65 kA	≥ 65 kA	UL Subject 2682

Short Circuit Test Information

Fusing – The amperage and time delay characteristics of the fusing used in testing affect the electrical load seen by the device. UL Subject 2682 requires horsepower rated devices to withstand short circuit tests performed with fuses rated no larger than 400% of full load ampacity for motor circuits, or at least 100% of the amperage rating of devices for general branch circuit use.

MELTRIC used Mersen RK1 non-time delay type fusing for the horsepower rated devices because it is a common type of fuse used in motor applications. MELTRIC used RK5 time delayed fusing for non-horsepower ratings because it represents the most severe case of the various fusing scenarios that are typically used for general use applications.

Power Factor – The lower the power factor (p.f.) the more rigorous the test. UL Subject 2682 requires horsepower rated devices to withstand a short circuit test of 10,000 amps with a p.f. of 0.40 to 0.50. By comparison, UL 1682 requires devices with the same horsepower rating to withstand a 10,000 amp short circuit test with a much less rigorous p.f. of 0.70 to 0.80.

Short Circuit Test Summary Table

Device Information		Short Circuit Make & Withstand Rating ¹			
Model	General Use Rating	kA	VAC	Fusing used in Testing	
DSN20	20 A	10	600	RK1	80 A
		100	600	RK1	35 A
DSN30	30 A	100	600	RK1	125 A
DSN60	60 A	100	600	RK1	125 A
DSN100	100 A	100	600	RK1	250 A
DSN150	150 A	10	600	RK1	400 A
	*	100	600	RK1	225 A
DS20	20 A	100	600	RK1	80 A
DS30	30 A	100	600	RK1	125 A
DS60	60 A	100	600	RK1	250 A
DS100	100 A	65	600	RK1	175 A
	100 A	65	600	RK5 TD	100 A
DS200	200 A	10	600	RK1	500 A
		65	600	RK5 TD	200 A

¹ Testing performed with RK1 NTD current limiting fuses of a rating at 400% of the motor FLA. Testing with a 400% NTD fuse is representative of a 225% TD fuse. Testing performed with RK5 to current limiting fuse was based on fuses sized at 100% of the device rating for branch circuits. Due to the variances in breaker performance, no testing was performed with circuit breakers. Per UL2682 Testing with inverse-time circuit breakers shall not be required if it is shown that the clearing time of the inverse-time circuit breakers will be less than that of the fuse with which the product has been tested.

* The fusing used limits the 100 kA rating to 60 hp @ 600V, 40 hp @ 480 V, 20 hp @ 240 V & 208 V.

CONTACT TECHNOLOGY

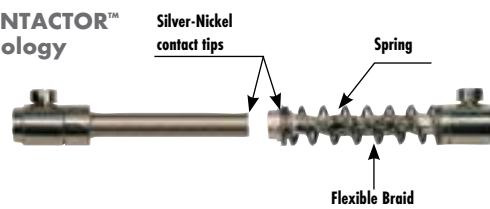

Silver-Nickel Contact Material

MELTRIC products feature solid silver-nickel (85%/15%), spring-loaded butt-style contacts similar to those used in motor starters and contactors. The silver-nickel material has significant advantages over the brass contacts commonly used on competitive devices.

Silver has very low initial contact resistance and is not negatively affected by oxidation. This helps to give it excellent electrical properties that are maintained even at high temperatures and after tarnishing. Nickel is a much harder material and contributes excellent mechanical properties. The combination of silver and nickel results in a contact material that has both superior electrical capabilities and excellent resistance to wear. Silver-nickel only welds at extremely high pressure and temperature, and thus, also withstands arcs very well. These features make silver-nickel a commonly used contact material by switchgear manufacturers.

By contrast, the brass material used in most competitive plugs and receptacles has much higher initial contact resistance and is negatively affected by oxidation. In an oxidized state, the contact resistance of brass is more than 20 times higher than that of silver-nickel. In addition, brass is a soft material that wears rapidly. In use, brass pin and sleeve and arcuate contacts suffer from the combined effects of the limitations of the material and the design. As oxidation and wear induced reductions in contact force occur, contact resistance increases. This increases operating temperature, which causes further oxidation and wear, perpetuating a vicious cycle of degradation. Brass is not arc resistant and is not suitable for making and breaking under load.

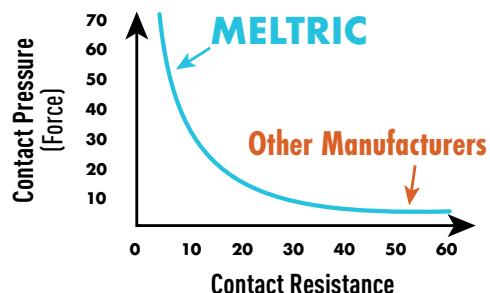

DECONTACTOR™
Technology

Comparison of pin and sleeve to MELTRIC solid silver-nickel contacts

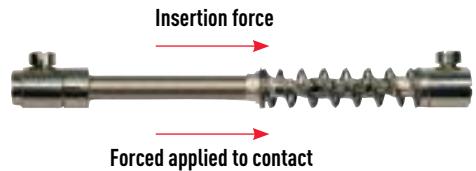

Spring-Loaded Contacts

Spring-loading of the contacts ensures that optimal pressure between the contacts is maintained – even after thousands of operations. This point is important because contact force is a key determinant of the quality of the connection. As the accompanying graph demonstrates, contact resistance increases as contact force decreases. Higher contact resistance generates more heat and oxidation, both of which contribute to the deterioration of the contact and loss of energy. This is a problem with pin and sleeve and arcuate type contacts because their contact force varies with manufacturing tolerances and is reduced due to wear that occurs with normal use.

Butt-Style Connection

MELTRIC's butt-style contact configuration provides a positive and secure connection and also makes connection and disconnection easy. With butt-style contacts, the force applied to the contacts is in-line with the insertion motion, so inserting a plug into its socket requires only a known and limited amount of effort. Contact wear and sensitivity to manufacturing tolerances is negligible, because the spring-loading is sufficient to compensate for minor differences in contact length.

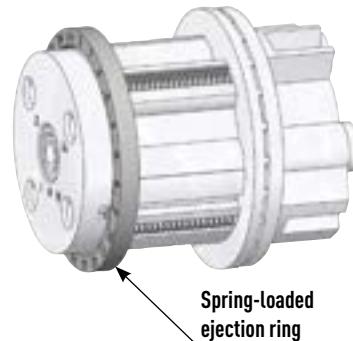

With MELTRIC's butt-style contacts the force applied to the contacts is in-line with the insertion motion.

With the pin and sleeve design used by our competitors, the contact force is at a right angle to the insertion/withdrawal force. There are numerous drawbacks to such a design:

- The contact pressure must be sufficient to prevent excessive temperature rise but is limited by the need to keep the insertion force reasonable.
- The necessary friction wears out the contacts, and diminishes contact pressure over time.
- Normal manufacturing tolerances result in wide variations in performance, even with new devices.
- The sliding contact design does not make & break cleanly, so arcing is more likely to occur.

DECONTACTOR™ Technology

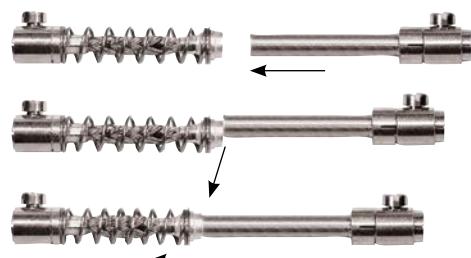

Spring-loaded ejection system ensures a quick break of the contacts.

Quick Break Mechanism

On most MELTRIC devices the circuit is broken simply by depressing the pawl. Doing so releases the energy in a spring-loaded operating mechanism, which instantaneously breaks the circuit and ejects the plug to the 'OFF' position. Contact breaking time is about 15 milliseconds. The quick break mechanism is automatically reloaded when the plug is re-inserted.

In contrast, the disconnection speed of pin and sleeve and twist type devices is dependent on the user's motion when removing the plug.

MELTRIC contacts are self-cleaning.

Self-Cleaning System

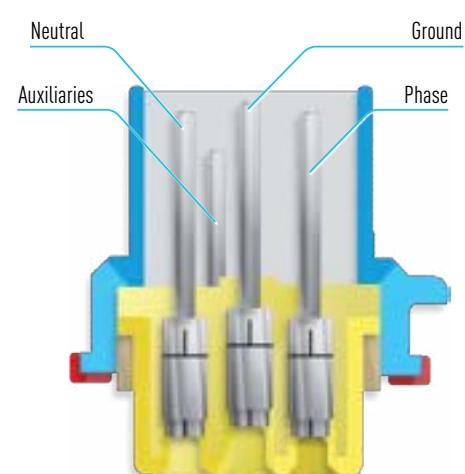

Most MELTRIC contacts close with a self-cleaning, wiping action. When the contacts initially mate, they are slightly offset. In completing the connection, the plug contacts are rotated partially across the receptacle contacts, helping to remove deposits from the contact surface.

Contact Mating Sequence

MELTRIC contacts mate in a specific sequence to ensure a proper and safe connection.

1. The earth [ground] closes first.
2. Then the neutral.
3. Then the phases.
4. Then the auxiliary contacts, if any. These auxiliary contacts can, therefore, be used as "pilot" contacts.

On opening, the sequence is reversed.

The contacts are set in the plug at different levels to achieve the desired mating sequence.

DEAD-FRONT AND ENCLOSED ARC CHAMBERS

For Maximum Protection from Live Parts

Most MELTRIC receptacles feature a dead-front safety shutter which encloses and isolates the live contacts when the plug is removed. Only electrically compatible plugs can unlock the safety shutter and gain access to the live parts. In addition to preventing accidental exposure to live parts, the safety shutter also keeps the contacts clean and out of reach even if the lid is left open.

The receptacle's dead-front protects workers from accidental tool and wire insertion.

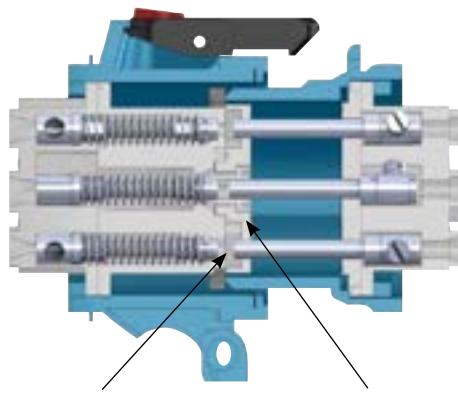

Protection During the Making and Breaking Process

When disconnecting or connecting a MELTRIC plug from/to a receptacle, the user is completely protected from exposure to arc flash or live parts. This is because the contacts can only make or break while they are enclosed in internal arc chambers within the receptacle.

During disconnection, the pressing of the pawl on the receptacle breaks the connection (inside the arc chambers) and ejects the plug to its rest or "OFF" position. While in the rest position, the plug and receptacle casings maintain a dead-front and thus protect the user from live parts. The plug cannot be fully withdrawn until it is rotated 30° counterclockwise. This closes and locks the safety shutter preventing access to live parts during and after the removal of the plug.

During connection, the plug contacts can only access the receptacle contacts after the plug has been partially inserted into the receptacle and has then been rotated 30° to open the safety shutter. Because the interaction of the skirted plug casing with the receptacle forms a protective enclosure that prevents access to the contacts as soon as insertion begins, a dead-front is maintained even after the safety shutter is opened. Once the safety shutter has been opened, the plug contacts can be safely inserted into the arc chambers where the connection is made as the plug is latched to the receptacle.

DECONTACTOR™ Technology

Arc chamber prevents outside exposure to arc flash.

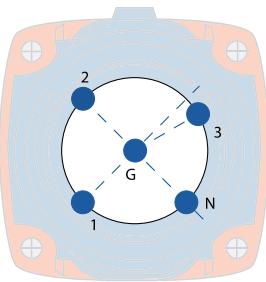

Safety shutter prevents finger or tool access to live parts.

Protection from Insertion of Inappropriate Plugs

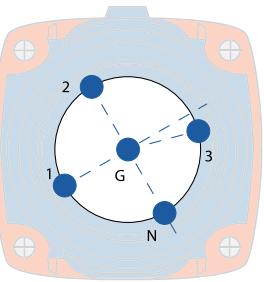

Most MELTRIC products utilize multiple keying positions to prevent mating of mismatched voltage/frequency combinations. Only plugs and receptacles that are keyed/notched in the same positions will mate with each other. Non-compatible plugs will be unable to open the safety shutter. This system prevents potentially dangerous situations. For example, a 250 VAC plug (notch 07) cannot be inserted into a 480 VAC receptacle (notch 04). Alternatively, on the PF and DX series, pegs and holes perform the same function as the notches.

Note: Some of the keying positions have been assigned to a designated global voltage. A few others are unassigned and are available if a user prefers to limit mating of plugs and receptacles that are only to be used on particular applications.

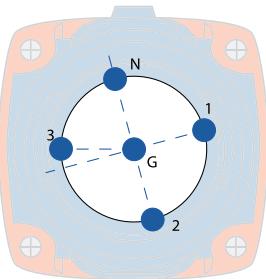

Commonly Used Keying Positions

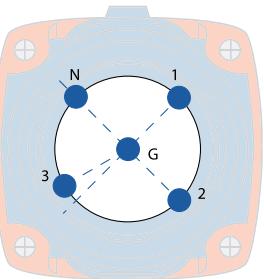

Position 04
255-277 VAC/440-480 VAC 60 Hz

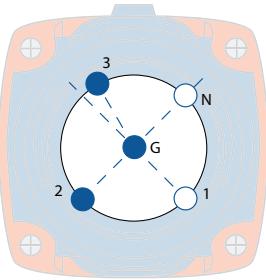

Position 07
110-125/220-250 VAC 60 Hz

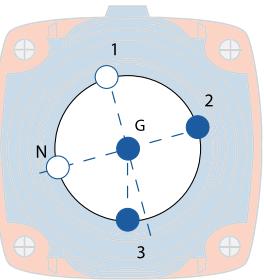

Position 14
347/600 VAC 60 Hz

Position 16
120-127 VAC/208-220 VAC 60 Hz

Position 10
110-130 VDC

Position 20
220-250 VDC

How to Identify Keying Positions of an Existing Device

Plug

Thin raised line

The keying position of most MELTRIC plugs can be determined by looking at the plug interior and finding a thin, raised line in the casing. This line is always directly above a number that identifies the plug's keying position.

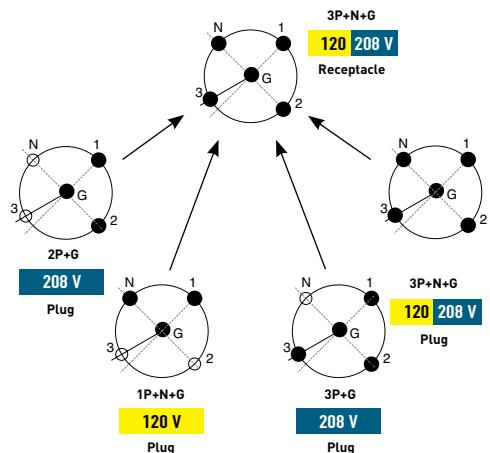

Note: See chart on page 15 for a complete list of voltage polarization positions and associated voltages.

Dual Voltage Devices Maximize User Flexibility

Some MELTRIC receptacles are designed to safely allow dual voltage capabilities.

For example, a 120/208 V rated 3P+N+G receptacle will safely provide power to several configurations of 208 V plugs and a single phase 120 V plug. Having two voltages delivered by a single receptacle allows some facilities to significantly reduce the number of receptacles that need to be installed.

Dual voltage receptacles are supplied with dual color coded voltage stickers.

Dual Voltages Typically Available from MELTRIC

125 250 V

120 208 V

277 480 V

347 600 V

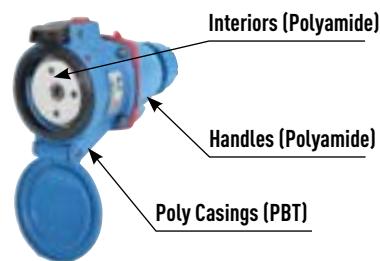

DEVICE MATERIALS AND THEIR RESISTANCE TO ENVIRONMENTS AND CHEMICALS

Polymeric Materials

Casings – The common technical name for the “Poly” material used by MELTRIC is polyamide (nylon). It’s a glass fibers reinforced, heat stabilized material which provides outstanding resistance to most chemical agents and environmental conditions, including UV radiation. This material also offers high impact resistance across a broad range of temperatures (shock resistance ratings to IK09) and creep resistance.

Interiors – The arc chambers for most MELTRIC devices are made of polyamide. Other materials are used such as Bakelite and melamine.

Accessories – Handles, angles and wall boxes are made of Polyamide (they are supplied with self tapping screws).

Metal Materials

Casings – Metal casings providing even greater impact resistance are standard on some MELTRIC products and are optional on others. Depending upon the product line, these casings may be made of zamak, aluminum or stainless steel. Aluminum, is the most commonly used. Aluminum receptacles are blue epoxy coated and aluminum plugs are specially treated to further improve corrosion resistance.

Contacts – All MELTRIC contact surfaces are made of solid silver-nickel with the exception of the PF and PFQ contacts which are solid pure silver. Silver-nickel and silver both provide excellent resistance to climatic conditions and to all known chemical agents found in industry with the exception of sulphuric acid. Products installed in sulphuric acid environments should have an environmental rating of at least Type 4X or IP66.

Accessories – Wall boxes, angles, and handles are in zamak or aluminum alloy. All zamak accessories are standardly protected by an epoxy paint.

These resistance charts are intended to give a general overview of the performance of our casings and mounting accessories. It is not intended to provide a guarantee of performance of our product as that will depend on the concentration of the chemical, the application temperature, the duration of the exposure, and other application specific factors. In cases where chemical compatibility may be in question the established practice is to place a representative sample device in the application environment to see how it holds up.

ENVIRONMENTAL/INGRESS PROTECTION (ENCLOSURE TYPE AND IP RATINGS)

Product	Type	IP
DSN	4X	66/67/69/69K

Note: The ratings in the table above do not apply to stainless steel devices.

Environmental Ratings Explained

NEMA/UL/CSA Enclosure Types (UL50)

Enclosure Type	Intended Use and Description
1	Indoor use primarily to provide a degree of protection against limited amounts of falling dirt.
2	Indoor use primarily to provide a degree of protection against limited amounts of waste and falling dirt.
3, 3R, 3S	Outdoor use primarily to provide a degree of protection against rain, sleet, and damage from external ice formation
4, 4X	Indoor or outdoor use primarily to provide a degree of protection against windblown dust and rain, splashing water, hose-directed water, and damage from external ice formation.
12	Indoor use primarily to provide a degree of protection against circulating dust, falling dirt and dripping non-corrosive liquids.

IP Ratings (IEC/EN 60529)

First Digit Protection against the ingress of solid foreign objects and access to hazardous parts		Second Digit Protection against the ingress of water with harmful effects		
0	No protection	-	0	No protection
1	50 mm	Back of hand	1	Vertically dripping water (condensation)
2	12.5 mm	Finger	2	Dripping water at 15°
3	2.5 mm	Tool	3	Spraying water at 60° (rain)
4	1 mm	Wire	4	Splashing water from any direction
5	Against Dust	-	5	Jetting water from any direction
6	Dust-tight	-	6	Powerful jetting water from any direction
-	-	-	7	Temporary submersion
-	-	-	9	High pressure, high temperature jet sprays

IMPACT RESISTANCE

MELTRIC product resistance to mechanical shocks is specified in accordance with their IK ratings.

MELTRIC Products IK Ratings (per IEC/EN 50102)

Product	Material	IK Ratings (in Joules)

SP/SPEX	Poly	09 (10)
DXA1	Metal	10 (20)
CS1000	Poly	08 (5)

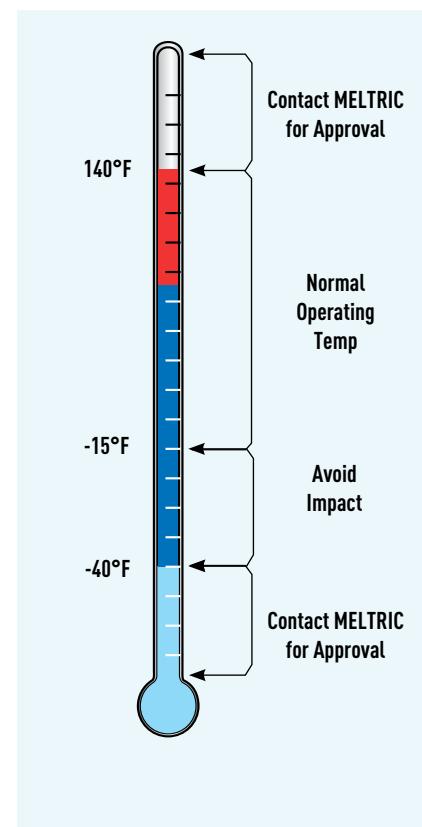

OPERATING TEMPERATURES

Hot Temperatures

Some devices that do not contain any polyamide can operate up to 175°F/80°C but precise conditions and duty cycles must be submitted to the MELTRIC engineering department for approval. A limited range of products are available for ambient temperatures up to 465°F/240°C. Contact MELTRIC engineering for more information.

Cold Temperatures

Below -15°F materials become more brittle and impact should be avoided, especially on polyamide materials. However, MELTRIC's metal and polyester casings can be used as low as -40°F/-40°C and some MELTRIC devices are in service at -75°F/-60°C. Contact engineering for more information.
